Solutions (71-75):

From the given statements, there is a gap of three floors between J and L and both of them live on odd number of floors. Here we get 2 possibilities i.e. Case 1 and Case 2. I lives on the 6th floor.

Solutions (83-87): From the given statements, S sits third to the right of M. Three persons sit between M and N. Here, we have two possible cases i.e. case1 and case2:

Case 1

Case 2

Q		N	O	T		M		S

J was born in March and is not born on an even date. Hence, he was born on 17th of March. Two persons were born between J and the one who was born on an even number date. N was born immediately after P. Here we get four possibilities.

APRIL	P							
MAY	N		P					
JUNE		24	N	24	P	24		24
JULY					N		P	
AUGUST							N	

P was not born in a month that has 31 numbers of days. Hence case 2 and case 4 get eliminated. N was not born in the month of May. Hence case 1 gets eliminated. Two persons were born between N and the one that has birthday on 17th date. The youngest person was born on 24th date. No three persons have their birthday on same date consecutively. M was born after K. L was not born on an even date. So, the final arrangement will be:
