Que. 21 Read the following passage about mother tongue and answer the questions that follow.

Formal education through the medium of a language that is not a child's mother tongue, leading to children not learning their own language fully (not learning the language that the parent generation knows). This is a subtractive language learning situation, where the dominant language is learned at the cost of the mother tongue. Instead, knowledge in dominant languages can be added to the children's linguistic repertoire, at no cost to the mother tongues. In this kind of additive language learning situation the result is additive bilingualism or multilingualism, and the maintenance of the mother tongue. Subtractive language learning also means that these children will tend not to speak their mother tongue to their own children.

Homogenizing mass media, entertainment and other cultural products in dominant languages takes place through which these products send the message that the languages in which films, TV and pop music come have a higher status than others. Urbanization, migration and employment mobility of people often lead to the disintegration of language communities, with fewer chances for children to hear and use their parents' language(s) on a daily basis. A labor market which requires knowledge of dominant languages and does not offer economic or psychological incentives for maintaining the smaller languages. Insufficient protection of linguistic human rights and ideologies see not multilingualism but monolinguals in dominant languages as normal, sufficient and desirable, both for states (one nation - one language) and for individuals. This leads to parents often thinking that their children have to choose between either learning their mother tongue (and losing out on the labor market) or learning the dominant language (and sacrificing their own language).

What are the reasons for monolingualism in dominant languages as normal?

1. Labour market, insufficient protection of linguistic right and ideologies
2. People's desire to learn more language and job market
3. General thinking in people and job market enable people to learn only one language
4. Migration, political assertion and ideologies

Correct Option - 1

Que. 22 What is known as the 'additive language learning situation'?

1. Parents have no choice but to choose between mother tongue or dominant language.
2. Parents have no choice but do not choose mother tongue.
3. Parents have choice, but choose the dominant language to the mother tongue

4. Government has no choice, but to impose a dominant language among its people.

Correct Option - 3

Que. 24 Which of the following statements, according to the author, is TRUE?

1. Homogenisation of certain instruments of society leads to language hierarchies.
2. Mother tongue is always the dominant language in society.
3. Some language are superior and some are inferior,
4. Language domination takes place through political interference.

Correct Option - 1

Que. 25 What is 'subtractive language learning'?

3. Learning English at the cost of mother tongue
4. Simultaneously learning two languages which support each other

Correct Option - 2

Que. 26 Direction for Reading Comprehension: The passages given here are followed by some questions that have four answer choices; read the passage carefully and pick the option whose answer best aligns with the passage.

It's easy to forget that most of the world's languages are still transmitted orally with no widely established written form. While speech communities are increasingly involved in projects to protect their languages – in print, on air and online – orality is fragile and contributes to linguistic vulnerability. But indigenous languages are about much more than unusual words and intriguing grammar: They function as vehicles for the transmission of cultural traditions, environmental understandings and knowledge about medicinal plants, all at risk when elders die and livelihoods are disrupted.

Both push and pull factors lead to the decline of languages. Through war, famine and natural disasters, whole communities can be destroyed, taking their language with them to the grave, such as the indigenous populations of Tasmania who were wiped out by colonists. More commonly, speakers live on but abandon their language in favor of another vernacular, a widespread process that linguists refer to as “language shift” from which few languages are immune. Such trading up and out of a speech form occurs for complex political, cultural and economic reasons – sometimes voluntary for economic and educational reasons, although often amplified by state coercion or neglect. Welsh, long stigmatized and disparaged by the British state, has rebounded with vigor.

Many speakers of endangered, poorly documented languages have embraced new digital media with excitement. Speakers of previously exclusively oral tongues are turning to the web as a virtual space for languages to live on. Internet technology offers powerful ways for oral traditions and cultural practices to survive, even thrive, among increasingly mobile communities. I have watched as videos of traditional wedding ceremonies and songs are recorded on smartphones in London by Nepali migrants, then uploaded to YouTube and watched an hour later by relatives in remote Himalayan villages . . . Globalization is regularly, and often uncritically, pilloried as a major threat to linguistic diversity. But in fact, globalization is as much process as it is ideology, certainly when it comes to language. The real forces behind cultural homogenization are unbending beliefs, exchanged through a globalized delivery system, reinforced by the historical monolingualism prevalent in much of the West.

Monolingualism – the condition of being able to speak only one language – is regularly accompanied by a deep-seated conviction in the value of that language over all others. Across the largest economies that make up the G8, being monolingual is still often the norm, with multilingualism appearing unusual and even somewhat exotic. The monolingual mindset stands in sharp contrast to the lived reality of most the world,

which throughout its history has been more multilingual than unilingual. Monolingualism, then, not globalization, should be our primary concern.

Multilingualism can help us live in a more connected and more interdependent world. By widening access to technology, globalization can support indigenous and scholarly communities engaged in documenting and protecting our shared linguistic heritage. For the last 5,000 years, the rise and fall of languages was intimately tied to the plow, sword and book. In our digital age, the keyboard, screen and web will play a decisive role in shaping the future linguistic diversity of our species.

From the passage, we can infer that the author is in favour of:

1. “language shifts” across languages.
2. cultural homogenisation.
3. greater multilingualism.
4. an expanded state role in the preservation of languages

Correct Option - 3

Que. 27 The author mentions the Welsh language to show that:

1. efforts to integrate Welsh speakers in the English-speaking fold have been fruitless.
2. languages can revive even after their speakers have gone through a “language shift”.
3. vulnerable languages can rebound with state effort.
4. while often pilloried, globalisation can, in fact, support linguistic revival.

Correct Option - 2

Que. 28 The author lists all of the following as reasons for the decline or disappearance of a language EXCEPT:

1. governments promoting certain languages over others.
