Correct Marks : 2 Wrong Marks : 0.5

Read the given assertion (A) and reason (R) and select the correct option based on the analysis of these statements.

Assertion (A): For a newborn delivered by an HIV-positive mother, standard protocol dictates that the infant must start a prophylactic course of antiretroviral therapy (ART) immediately, ideally within 6 to 12 hours of birth.

Reason (R): The goal of immediate newborn ART prophylaxis is to prevent the vertical transmission of the virus by treating any HIV that may have crossed the placenta or been acquired during the birthing process, thereby minimising the risk of mother-to-child transmission (MTCT).

Options :

1. ✔ Both A and R are true, and R is the correct explanation of A.
2. ✖ Both A and R are true, but R is not the correct explanation of A
3. ✖ A is true, but R is false.
4. ✖ A is false, but R is true.

Options :

1. ✖ Blood pressure
2. ✔ Oxygen saturation
3. ✖ Carbon dioxide level
4. ✖ Heart rate

Question Number : 16 Question Id : 4410091503104 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

Read the given assertion (A) and reason (R) and select the correct option based on the analysis of these statements.

Assertion (A): A GCS score of 8 or less is clinically significant and is often used as a critical threshold indicating a severe head injury and suggesting the immediate need for airway protection (e.g., endotracheal intubation).

Reason (R): The GCS primarily provides a rapid, standardised and objective measure of a patient's level of consciousness, which is a direct reflection of the functional state of the cerebral cortex and brainstem reticular system.

Options :

1. ✔ Both A and R are true, and R is the correct explanation of A.
2. ✖ Both A and R are true, but R is not the correct explanation of A.
3. ✖ A is true, but R is false.
4. ✖ A is false, but R is true.

Question Number : 17 Question Id : 4410091503112 Question Type : MCQ Option Shuffling : Yes

3. ✖ Nausea and vomiting
4. ✖ Breast tenderness

Question Number : 46 Question Id : 4410091502996 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

In the following question, a statement of Assertion (A) is given, followed by a corresponding statement of Reason (R). Select the correct option based on the analysis of these statements.

Assertion (A): The Non-Stress Test (NST) is highly effective in assessing the immediate, acute fetal well-being, but it must be supplemented by an Ultrasound (USG) derived Biometric Profile (BPP) for a complete assessment of chronic fetal status.

Reason (R): The NST primarily evaluates placental reserve by monitoring the fetal heart rate (FHR) accelerations in response to fetal movement, while the USG measures parameters like Amniotic Fluid Index (AFI), which reflects long-term uteroplacental function and fetal renal perfusion.

Options :

1. ✓ Both A and R are true, and R is the correct explanation of A.
2. ✗ Both A and R are true, but R is NOT the correct explanation of A.
3. ✗ A is true, but R is false.
4. ✗ A is false, but R is true.

Question Number : 47 Question Id : 4410091503010 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

A 28-year-old primigravida, at 36 weeks of gestation, was admitted to the emergency department with a severe, persistent headache and blurred vision. Her blood pressure is measured at 170/115 mmHg. Urinalysis reveals +3 protein. After 15 minutes, developed generalized tonic-clonic muscle contractions lasting approximately 60 seconds. What may be the most likely diagnosis of the patient?

Options :

1. ✓ Eclampsia
2. ✗ Tetany
3. ✗ Pulmonary embolism
4. ✗ Pulmonary edema

Question Number : 48 Question Id : 4410091506430 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

What is the recommended first-line manoeuvre for managing shoulder dystocia?

Options :

1. ✖ Woods corkscrew manoeuvre
2. ✖ Zavanelli manoeuvre
3. ✔ McRoberts manoeuvre
4. ✖ Mauriceau–Smellie–Veit manoeuvre

Which of the following category of drugs is used to reduce fever?

Options :

1. ✖ Analgesics
2. ✖ Antibiotics
3. ✖ Diuretics
4. ✔ Antipyretics

Question Number : 18 Question Id : 4410091503121 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

Read the given assertion (A) and reason (R) and select the correct option based on the analysis of these statements.

Assertion (A): Weakly acidic drugs, like aspirin, are primarily absorbed from the stomach, which has a low pH environment.

Reason (R): At the stomach's low pH, a larger fraction of the acidic drug exists in its non-ionised (uncharged), lipid-soluble form, which can easily cross the lipid cell membranes via passive diffusion.

Options :

1. ✓ Both A and R are true, and R is the correct explanation of A.
2. ✗ Both A and R are true, but R is not the correct explanation of A.
3. ✗ A is true, but R is false.
4. ✗ A is false, but R is true.

On examination of a newborn's head 12 hours after birth, the midwife notes a swelling that is circumscribed within the suture lines, soft, fluctuant and incompressible. What does this finding most likely indicate?

Options :

1. ✖ Caput succedaneum
2. ✔ Cephalohematoma
3. ✖ Craniosynostosis
4. ✖ Bulging fontanel

Question Number : 46 Question Id : 4410091503000 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

In the following question, a statement of Assertion (A) is given, followed by a corresponding statement of Reason (R). Mark the correct answer based on the analysis of these statements:

Assertion (A): Administering synthetic oxytocin (Pitocin) can help manage hypotonic uterine inertia.

Reason (R): Oxytocin acts on the uterine muscles and causes stronger uterine contractions, which help to establish a positive feedback loop during labour.

Options :

1. ✔ Both A and R are true, and R is the correct explanation of A.
2. ✖ Both A and R are true, but R is NOT the correct explanation of A.
3. ✖ A is true, but R is false.
4. ✖ A is false, but R is true.

Question Number : 47 Question Id : 4410091506435 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

Which of the following is the main feature of Premature Rupture of Membranes?

Options :

1. ✖ A sharp, sudden pain in the abdomen
2. ✔ A gush or trickle of fluid from the vagina
3. ✖ A fever and unusual vaginal discharge
4. ✖ Regular, but mild, uterine contractions

Question Number : 48 Question Id : 4410091524081 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

Superfecundation is:

Options :

1. ✓ Fertilization of two or more ova in the same cycle from separate acts of intercourse
2. ✗ Fertilization of single ovum by sperm from different acts of intercourse
3. ✗ Implantation of multiple embryos in the uterus
4. ✗ Fertilization of an ovum by single sperm from single act of intercourse
