Directions (79-83): Read the following passage carefully and answer the questions based on the passage:

Blockchain technology, which was first created for cryptocurrencies like Bitcoin, has the potential to revolutionize the banking industry by providing a decentralized, safe, and open way to handle financial transactions. Blockchain minimizes reliance on middlemen, lowers operating costs, and speeds up transactions—especially for international payments—by using a distributed network. However, there are a number of obstacles to overcome when integrating blockchain technology into international finance. These include the need for banks to reframe their responsibilities and retrain employees, security flaws, and regulatory uncertainty. To enable safe and effective adoption, strong legal frameworks must be developed. Despite these challenges, there is still a lot of interest in blockchain technology; estimates suggest that the banking industry's blockchain market will grow to \$22.5 billion by 2026.

Q79. Why is blockchain viewed as transformative in the way it offers a decentralized and transparent method of handling transactions?

- (a) It removes the need for intermediaries and increases transaction speed, especially in cross-border payments.
- (b) It relies heavily on centralized authorities to validate every financial movement, which speeds up the payment process.
- (c) It slows down international payments due to its complex verification process.
- (d) It restricts transparency in order to preserve traditional banking secrecy.

Ans.(a)

Q80. In what way does blockchain adoption require banks to rethink their roles and internal structures?

- (a) It eliminates the need for human employees as all tasks are automated using AI and computers.
