Directions (54-58): Read the following passage carefully and answer the questions based on the passage:

Post-structuralism emerged in France in the late 1960s. The two figures most closely associated with this emergence are Roland Barthes and Jacques Derrida (1930-2004). Barthes's work around this time began to shift in character, moving from a structuralist to a post-structuralist phase. The difference can be seen by comparing two accounts of the nature of the narrative by Barthes, one from each phase: namely, the essay "The Structural Analysis of Narrative" (first published in 1966) and The Pleasure of the Text (1973). The former is detailed, methodological, and forbiddingly technical, while the latter is really just a series of random comments on narrative, arranged alphabetically, thereby, of course, emphasizing the randomness of the material. Between these two works came the crucial essay 'The Death of the Author' (1968), which is the 'hinge' around which Barthes turns from structuralism to post-structuralism. In that essay, he announces the death of the author, which is a rhetorical way of asserting the independence of the literary text and its immunity to the possibility of being unified or limited by any notion of what the author might have intended, or 'crafted' into the work. Instead, the essay makes a declaration of radical textual independence: the work is not determined by intention or context. Rather, the text is free by its very nature of all such restraints.

Q54. What marked Roland Barthes's shift from structuralism to post-structuralism?

- (a) His gradual rejection of narrative theory and complete move into political writing.
- (b) His decision to limit his work to classical literature rather than contemporary writing.
- (c) The contrast between his technical structuralist essay "The Structural Analysis of Narrative" and the playful style of The Pleasure of the Text.
- (d) His adoption of psychological theories to explain literary meaning.

Ans.(c)

Q55. Why is "The Death of the Author" seen as the turning point in Barthes's intellectual journey?

- (a) Due to its introduction of a new type of biography that placed emphasis on the psychological history of the authors
- (b) By implication, it recommended that the authors stay away from their personal lives as a source of inspiration for their works
- (c) In this sense, it was the cause of the authors being pushed towards unveiling their creative workings through their writing
- (d) Through the symbolic act of virtually saying that texts shouldn't be linked to the authors' intentions, thus granting radical freedom to texts

Ans.(d)

Q56. What is the central difference between structuralism and post-structuralism in Barthes's work?

- (a) Structuralism turns down language-based methods, while post-structuralism totally depends on the author's life.
- (b) Structuralism seeks stable meaning, whereas post-structuralism accepts ambiguity and playfulness
- (c) Structuralism puts forward affective interpretation, whereas post-structuralism stimulates ethical readings.
- (d) Structuralism is concerned with spontaneous creativity, whereas post-structuralism prefers predetermined rules.

Ans.(b)

Q57. What is the claim of post-structuralism concerning the text?

- (a) The text is not tied to the author, with the reader being able to come up with several interpretations
- (b) The meaning of a text is constant and completely controlled by what the author intended.
- (c) A text is always a historical document, and subjective reading is not allowed.
- (d) Only through the study of the author's private life can meaning be grasped.

Ans.(a)

Q58. The Pleasure of the Text is viewed as a post-structuralist text for the following reasons:

- (a) It does not provide a strict, linear analysis of narrative systems but rather presents them in a very fragmented manner that is confusing for the readers
- (b) It claims that only scholars are qualified to ascertain the correct interpretation of a work.
- (c) The narrative is explained scientifically through the use of models and statistics.
- (d) By rejecting strict methodology, the author provides random, alphabetically organized thoughts, which reveal the text's unpredictability.

Ans.(d)
