**Comprehension:**

Read the given passage and answer the questions that follow.

What is a historical fact? This is a crucial question into which we must look a little more closely. According to the common sense view, there are certain basic facts which are the same for all historians and which form, so to speak, the backbone of history – the fact, for example, that the Battle of Hastings was fought in 1066. But this view calls for two observations. In the first place, it is not with facts like these that the historian is primarily concerned. It is no doubt important to know that the great battle was fought in 1066 and not in 1065 or 1067, and that it was fought at Hastings and not at Eastbourne or Brighton. The historian must not get these things wrong. But when points of this kind are raised, I am reminded of Housman's remark that 'accuracy is a duty, not a virtue'. To praise a historian for his accuracy is like praising an architect for using well-seasoned timber or properly mixed concrete in his building. It is a necessary condition of his work, but not his essential function. It is precisely for matters of this kind that the historian is entitled to rely on what have been called the 'auxiliary sciences' of history archaeology, epigraphy, numismatics, chronology and so forth. The historian is not required to have the special skills which enable the expert to determine the origin and period of a fragment of pottery or marble, to decipher an obscure inscription or to make the elaborate astronomical calculations necessary to establish a precise date. These so-called basic facts, which are the same for all historians, commonly belong to the category of the raw materials of the historian rather than of history itself. The second observation is that the necessity to establish these basic facts rests not on any quality in the facts themselves, but on a decision of the historian. In spite of CP Scott's motto, every journalist knows today that the most effective way to influence opinion is by the selection and arrangement of the appropriate facts. It used to be said that facts speak for themselves. This is, of course, untrue. The facts, speak only when the historian calls on them: it is he who decides to which facts to give the door, and in what order or context. It was, I think, one of Pirandello's characters who said that a fact is like a sack – it won't stand up till you've put something in it. The only reason why we are interested to know that the battle was fought at Hastings in 1066 is that historians regard it as a major historical event. It is the historian who has decided for his own reasons that Caesar's crossing of that petty stream, the Rubicon, is a fact of history, whereas the crossing of the Rubicon by millions of other people before or since interests nobody at all. The fact that you arrived in this building half an hour ago on foot, or on a bicycle, or in a car, is just as much a fact about the past as the fact that Caesar crossed the Rubicon. But it will probably be ignored by historians. Professor Talcott Parsons once called science 'a selective system of cognitive orientations to reality'.

Q.14 Which of the following is the primary difference between an electrolytic cell and a galvanic cell?

- Ans
- 1. Electrolytic cells utilise spontaneous chemical reactions to produce electricity, while galvanic cells use external power sources.
  - 2. Electrolytic cells generate electrical energy, while galvanic cells consume it.
  - 3. Electrolytic cells operate under standard conditions, while galvanic cells operate under non-standard conditions.
  - 4. Electrolytic cells involve oxidation reactions, while galvanic cells involve reduction reactions.

Q.15 The pavement failures may be due to one or a combination of several causes. The maintenance forms an important component of the entire road system. Identify the correct statement/s related to operations involved in the pavement maintenance.

1. Assessment of road condition periodically
2. Adopting the most appropriate maintenance steps with least delay

- Ans
- 1. Statement 1 is true and statement 2 is false
  - 2. Both statements are true, and statement 2 depends on statement 1
  - 3. Statement 1 is false and statement 2 true
  - 4. Both statements are true, and statement 2 does not depend on statement 1

Q.18 Match the following surfaces with their suitable primers.

A. Plywood	1. Zinc chromate primer
B. Light alloys	2. Red-oxide Zinc chromate primer
C. Galvanised Iron	3. Cement primer
D. Asbestos	4. Aluminium primer

- Ans
- 1. A-2, B-3, C-4, D-1
  - 2. A-4, B-1, C-2, D-3
  - 3. A-4, B-3, C-2, D-1
  - 4. A-2, B-1, C-4, D-3

Q.19 Select the correct option about the following types related to the nature of ground motion.

Type I: Motion of practically single shock type occurs only at short distances from the epicentre, only on a firm ground and only for shallow earthquakes.  
 Type II: A moderately long, extremely irregular motion type is associated with moderate distance from the focus and occurs only on a firm ground.

- Ans
- 1. Type I is incorrect, but Type II is correct.
  - 2. Both the types are incorrect.
  - 3. Type I is correct, but Type II is incorrect.
  - 4. Both the types are correct.

Q.11 Read the given assertion (A) and reason (R) and select the correct option.

Assertion (A): The pore pressure at failure is controlled by the tendency of the soil to dilate or contract.

Reason (R): Pore pressure parameter ( $A_f$ ) decreases with decreasing water content at constant initial effective stress.

- Ans
- 1. A is true but R is false.
  - 2. Both A and R are true but R is not the correct explanation of A.
  - 3. Both A and R are true and R is the correct explanation of A.
  - 4. A is false but R is true.

Q.14 What is the primary difference between an orthographic projection of plane and perspective projection?

- Ans
- 1. There is no difference; both terms refer to the same concept.
  - 2. Orthographic projection is 2D, while perspective projection is 3D.
  - 3. Orthographic projection uses parallel projectors, while perspective projection uses converging projectors.
  - 4. Perspective projection preserves the true shape and size of the object, while orthographic projection may result in distortion.

Q.14 A body is submerged fully in surrounding fluid. If it has low speed with  $\frac{U}{\sqrt{\frac{E}{\rho}}}$  value less than or equal to 0.3 and if the change in density is insignificant, then by adopting the method of dimensional analysis, which of the following can be neglected to derive the expression for drag and lift?

- Ans
- 1. Reynolds number, Mach number and Froude number
  - 2. Reynolds number and Froude number
  - 3. Mach number and Froude number
  - 4. Mach number and Reynolds number

Q.7 A four-storey reinforced concrete frame structure is situated in Guwahati (Zone V), as shown in the following figure. The height between the floors is 3 m and the total height of the structure is 12 m. The dead load and the regular living load are combined at appropriate floors. The soil beneath the foundation is believed to be hard rock, whose spectral acceleration is 2.50. Assume that the structure is meant to be utilised as a hospital, for which importance factor is 1.5. Determine the total base shear by using IS 1893 (Part 1): 2002. Consider the response reduction factor = 5.0 for the special RC moment-resisting frame and the zone factor = 0.36.

- Ans
- 1. 1250.5 kN
  - 2. 956.5 kN
  - 3. 875.5 kN
  - 4. 1012.5 kN

Q.9 Identify whether the given statements is/are true or false.

- (A) There exists an analytic function  $f$  in unit disk such that  $f\left(-\frac{1}{2}\right) = 3$ ,  $f\left(\frac{1}{n^2}\right) = 5$  for  $n \geq 2$ .
- (B) There exists an analytic function  $f$  in unit disk such that  $f\left(\frac{1}{3n}\right) = \frac{1}{n}$ ,  $f\left(\frac{1}{3n+1}\right) = \frac{1}{n}$  for  $n \geq 2$ .

- Ans
- 1. Both (A) and (B) are false
  - 2. (A) is false but(B) is true
  - 3. Both (A) and (B) are true
  - 4. (A) is true but(B) is false
