Directions: Read the passage given below and answer the questions that follow by choosing correct/most appropriate option:

1. Back in the days of America's Wild West, when cowboys roamed the range and people were getting themselves caught up in gunfights, a new phrase-'snake oil' entered the language. It was a dismissive term for the patent medicines, often useless, sold by travelling traders who always claimed miraculous cure for everything from baldness to snakebite. Selling 'snake oil' was almost as risky as business as cattle stealing; you might be thrown out of town if your particular medicine, as you realized it would, failed to live up to its claims. Consequently, the smarter 'snake oil' sellers left town before their customers had much chance to evaluate the 'cure' they had just bought.
2. The remarkable thing about many of the medicines dismissed then as 'snake oil' is not so much that they failed to live up to the outrageous claims made for them- those that weren't harmless coloured water could be positively dangerous. What's remarkable is that so many of the claims made for some of these remedies, or at least their ingredients, most of them plant based, have since been found to have at least some basis in fact.
3. One, Echinacea, eventually turned out to be far more potent than even its original promoter claimed. Echinacea first appeared in 'Meyer's Blood Purifier', promoted as a cure-all by a Dr H.C.F Meyer – a lay doctor with no medical qualifications. 'Meyer's Blood Purifier' claimed not only to cure snakebite, but also to eliminate a host of other ailments. Native to North America, the roots of Echinacea, or purple cornflower, had been used by the plains Indians for all kinds of ailments long before Meyer came along. They applied poultices of it to wounds and stings, used it for teeth and gum disease and made a tea from it to treat everything from colds and measles to arthritis. They even used it for snakebite.

Read the passage given below and answer the questions that follow by choosing correct/most appropriate option:

1. There is consistent, strong evidence to prove that the SARS-CoV-2 virus, behind the COVID-19 pandemic, is predominantly transmitted through air, according to a new assessment published on Friday in The Lancet journal. The analysis by six experts from the UK, the US and Canada says public health measures to fail to treat the virus as predominantly the airborne route leaves the people unprotected and allows the virus to spread. Although some studies in the past have suggested that COVID-19 may spread through air, overall scientific literature on the subject has been inconclusive. In July last year, over 200 scientists from 32 nations wrote to WHO, saying there is evidence that the Corona virus is airborne, and even smaller particles can infect people. "The evidence supporting airborne transmission is overwhelming, and evidence supporting large droplet transmission is almost non-existent", said Jose-Luis Jimenez, from the University of Colorado Boulder in the US. "It is urgent that the world Health Organization and other public health agencies adapt their description of transmission to the scientific evidence so that the focus of mitigation is put on reducing airborne transmission," Jimenez said. Studies have confirmed these events cannot be adequately explained by close contact or touching shared surfaces or objects, the researchers said in their assessment.
2. They noted the transmission rates of SARS-CoV-2 are much higher indoors than outdoors, and transmission is greatly reduced by indoor ventilation. The term cited previous studies estimating that silent – asymptomatic or pre-symptomatic – transmission of SARS-CoV-2 from people who are not coughing or sneezing accounts for at least 40 percent of all transmission.
