Q.11 For different sets of datasets X and Y, correlation coefficient between X and Y, that is R and standard deviation of X and Y, that is, S(X) and S(Y) are given in A-D below. Estimate the covariance between X and Y for each dataset and arrange in ascending order.

- A. $R = 0.5$, $S(X) = 8$, $S(Y) = 10$
 B. $R = 4/7$, $S(X) = 7$, $S(Y) = 9$
 C. $R = 0.7$, $S(X) = 12$, $S(Y) = 5$
 D. $R = 19/42$, $S(X) = 14$, $S(Y) = 6$

Choose the correct answer from the options given below:

1. B, A, D, C
 2. C, B, A, D
 3. B, D, A, C
 4. A, C, D, B

Options 1. 1

2. 2
 3. 3
 4. 4

Comprehension:

Read the following passage carefully and answer the questions:

The capitalist system of society does not foster healthy relations among human beings. A few people own all the means of production and others-though nominally few have to sell their labour under conditions imposed upon them. The emphasis of capitalism being on the supreme importance of material wealth the intensity of its appeal is to the acquisitive intensity. It promotes worship of economic power with little regard to the means employed for its acquisition and the end that it serves. By its exploitation of human beings to the limits of endurance its concentration is on the largest profit rather than maximum production.

Thus the division of human family is done on the basis of economic circumstances. All this is injurious to division of human dignity. And when the harrowed poor turn to the founders of religion for succour, they rather offer a subtle defence of the established order. They promise future happiness for their present suffering and conjure up visions of paradise to redress the balance to soothe the suffering and the revolt of the tortured men. The system imposes injustice, the religion justifies it.

SubQuestion No : 46

Q.46

In a capitalist system,

1. the ends justify the means
2. the means justify the ends
3. the means leading to exploitation are strictly prohibited
4. the religion decides the issue related to the means

Comprehension:

Read the passage carefully and answer the question that follows -

Phenomenology lies on the opposite side of the explanatory gap from computational theories. It is the study of consciousness from the first-person perspective-how the world appears to me. There is a long tradition of phenomenology in European philosophy and psychology, but it is sometimes dismissed as a legitimate approach to the study of perception, because it is inherently subjective. Scientific approaches are usually considered to require objective methods. However, phenomenological studies can be performed using a variant of standard empirical scientific methods, including hypothesis generation and observation. There are several key differences between conventional psychophysical observations and phenomenological observations. The convention in psychophysics is to keep subjects naïve as to the purpose of the experiment, and give them a well-defined task with highly constrained responses such as “yes” versus “no”. In phenomenological experiments subjects are often fully informed about the purpose of the experiment, and their task is kept relatively open with loosely constrained responses. Response classification may occur only after the data have been examined. A key check on validity in phenomenological experiments is intersubjectivity, or agreement among individuals about the nature of their perceptual experience.

SubQuestion No : 141

Q.141

Phenomenology is _____

1. a type of quantitative research.
2. an explanatory gap.
3. an example of computational theories.
4. dependent upon researcher's perspective.

Options 1. 1

2. 2

3. 3

Chosen Option : **3**

Comprehension:

Read the passage carefully and answer the question that follows -

Phenomenology lies on the opposite side of the explanatory gap from computational theories. It is the study of consciousness from the first-person perspective-how the world appears to me. There is a long tradition of phenomenology in European philosophy and psychology, but it is sometimes dismissed as a legitimate approach to the study of perception, because it is inherently subjective. Scientific approaches are usually considered to require objective methods. However, phenomenological studies can be performed using a variant of standard empirical scientific methods, including hypothesis generation and observation. There are several key differences between conventional psychophysical observations and phenomenological observations. The convention in psychophysics is to keep subjects naïve as to the purpose of the experiment, and give them a well-defined task with highly constrained responses such as "yes" versus "no". In phenomenological experiments subjects are often fully informed about the purpose of the experiment, and their task is kept relatively open with loosely constrained responses. Response classification may occur only after the data have been examined. A key check on validity in phenomenological experiments is intersubjectivity, or agreement among individuals about the nature of their perceptual experience.

SubQuestion No : 144

Q.144

Scientific approach to research _____

1. can never be based on personal experiences.
2. usually to be objective in nature.
3. can never be qualitative.
4. always uses some statistics.

Options 1. 1

2. 2

3. 3

4. 4

Read the passage carefully and answer the question that follows -

The etymology of the word allows us to see the child with a disability as fighting against the odds. How high those odds are depends on many factors, of which type and severity of impairment are two of immediate concern. Irrespective of these factors, the principle of the teacher's role as assisting the young person not to allow the problem to impede development is attractive. The metaphor does not lie only with the child with the particular disability; in the inclusive classroom it allows a picture of the teacher monitoring the learner, all learners, irrespective of physique, internal bodily systems, psychological adjustment or intelligence. Inclusion does not mean that handicap does not exist. If a disability handicaps performance in any significant way then in those areas a specific attack needs to be made on how the problem can be overcome. This may mean modifying curriculum demands and hence the need for a critical, objective assessment of skills and strengths that can be built up. It may mean devising and teaching strategies the child can use when faced with the situations they find difficult. Focusing on these practical aspects of the learner's needs will have the effect of lessening thinking about the disability and more on the achievement of goals and increasing abilities. It will also change the teacher's attitudes. Inclusion will be seen not as an insurmountable challenge but as a process of learning that affects everyone in the class and school.

SubQuestion No : 146

Q.146 Inclusive philosophy means that:

1. The teacher will not give extra time to a particular learner.
2. The teacher has to use prescribed pedagogies only.
3. The children with profound disabilities should be sent to special schools.
4. Irrespective of the challenge, the teacher will help the learner.

Options 1. 1

2. 2

3. 3
