Ans	✓ 1. B – A – D – C – E ✗ 2. B – D – A – C – E ✗ 3. A – B – D – E – C ✗ 4. B – C – D – E – A	
Comprehension: Read the given passage and answer the questions that follow. Wildfires are becoming an increasing menace in western United States, with Southern California being the hardest hit area. There's a reason fire squads battling more frequent blazes in Southern California are having such difficulty containing the flames, despite better preparedness than ever and decades of experience fighting fires fanned by the 'Santa Ana Winds'. The wildfires themselves, experts say, are generally hotter, faster and spread more erratically than in the past. Megafires, also called 'siege fires', are the increasingly frequent blazes that burn 500,000 acres or more – 10 times the size of the average forest fire of 20 years ago. Some recent wildfires are among the biggest ever in California in terms of acreage burned, according to state figures and news reports. One explanation for the trend to more superhot fires is that the region, which usually has dry summers, has had significantly below normal precipitation in many recent years. Another reason, experts say, is related to the century-long policy of the US Forest Service to stop wildfires as quickly as possible. The unintentional consequence has been to halt the natural eradication of underbrush, now the primary fuel for megafires.

Comprehension:

Read the given passage and answer the questions that follow.

Wildfires are becoming an increasing menace in western United States, with Southern California being the hardest hit area. There's a reason fire squads battling more frequent blazes in Southern California are having such difficulty containing the flames, despite better preparedness than ever and decades of experience fighting fires fanned by the 'Santa Ana Winds'. The wildfires themselves, experts say, are generally hotter, faster and spread more erratically than in the past.

Megafires, also called 'siege fires', are the increasingly frequent blazes that burn 500,000 acres or more – 10 times the size of the average forest fire of 20 years ago. Some recent wildfires are among the biggest ever in California in terms of acreage burned, according to state figures and news reports.

One explanation for the trend to more superhot fires is that the region, which usually has dry summers, has had significantly below normal precipitation in many recent years. Another reason, experts say, is related to the century-long policy of the US Forest Service to stop wildfires as quickly as possible. The unintentional consequence has been to halt the natural eradication of underbrush, now the primary fuel for megafires.

SubQuestion No : 59

Q.59 Identify the fact mentioned in the passage.

Ans ☒ 1. Megafires are caused due to the stopping of the natural eradication of the underbrush during wildfires.

☐ 2. Fire squads have difficulty because they are not prepared to fight forest fires.

☐ 3. Wildfires are becoming cooler and slower.

☐ 4. Megafires burn lesser forests than the average wildfires of 20 years ago.
