

**MARKING SCHEME**  
**Class: XII Session: 2024-25**  
**Computer Science (083)**

**Time allowed: 3 Hours**

**Maximum Marks: 70**

Q No.	SECTION A (21X1=21)	Marks
1.	False <i>(1 mark for correct answer)</i>	(1)
2.	(A) #THONPROGRAM <i>(1 mark for correct answer)</i>	(1)
3.	(A) not (True) and False <i>(1 mark for correct answer)</i>	(1)
4.	(B) ['l', 'ter', 'atio', 'al'] <i>(1 mark for correct answer)</i>	(1)
5.	ce lo <i>(1 mark for correct answer)</i>	(1)
6.	(B) False <i>(1 mark for correct answer)</i>	(1)
7.	(B) print(my_dict['apple', 'banana']) <i>(1 mark for correct answer)</i>	(1)
8.	(B) Removes the first occurrence of value x from the list <i>(1 mark for correct answer)</i>	(1)
9.	(D) t=tuple(1) <i>(1 mark for correct answer)</i>	(1)
10.	file.seek(0) ( OR file.seek(0,0) ) <i>(1 mark for correct answer)</i>	(1)
11.	False <i>(1 mark for correct answer)</i>	(1)
12.	(C) 12#15% <i>(1 mark for correct answer)</i>	(1)
13.	Alter (or Alter Table) <i>(1 mark for correct answer)</i>	(1)
14.	(A) Details of all products whose names start with 'App'	(1)

	<i>(1 mark for correct answer)</i>	
15.	(D) CHAR <i>(1 mark for correct answer)</i>	(1)
16.	(B) count() <i>(1 mark for correct answer)</i>	(1)
17.	(B) FTP <i>(1 mark for correct answer)</i>	(1)
18.	(B) Gateway <i>(1 mark for correct answer)</i>	(1)
19.	(B) Packet Switching <i>(1 mark for correct answer)</i>	(1)
20.	(B) Both A and R are true and R is not the correct explanation for A. <i>(1 mark for correct answer)</i>	(1)
21.	(C) A is True but R is False. <i>(1 mark for correct answer)</i>	(1)

Q No.	SECTION B (7 X 2 =14)	Marks
22.	A mutable object can be updated whereas an immutable object cannot be updated. Mutable object: [1,2] or {1:1,2:2} (Any one) Immutable object: (1,2) or '123' (Any one) <i>(1 mark for correct difference)</i> <i>(½ x 2 = 1 Mark for selecting correct objects)</i>	(2)
23.	(I) Arithmetic operators: +, - (II) Relational operators: >, >= <i>(½ x 4 = 2 Marks for each correct operator)</i>	(2)
24.	(I) A) L1.count(4)  OR B) L1.sort() <i>(1 mark for correct answer)</i>  (II) A) L1.extend(L2)	(2)

	OR																	
	B) L2.reverse() (1 mark for correct answer)																	
25.	(A), (C) (½ x 2 = 1 Mark)  Minimum and maximum possible values of the variable b: 1,6 (½ x 2 = 1 Mark)	(2)																
26.	<p style="text-align: center;">Table: <b>Student</b></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>ADMN</th> <th>RollNo</th> <th>Name</th> <th>PhoneNo</th> </tr> </thead> <tbody> <tr> <td>124</td> <td>1</td> <td>Chavi</td> <td>989899</td> </tr> <tr> <td>235</td> <td>2</td> <td>Arpita</td> <td>931124</td> </tr> <tr> <td>276</td> <td>3</td> <td>Chavi</td> <td>972457</td> </tr> </tbody> </table> <p>Primary key: ADMN Alternate keys: RollNo, PhoneNo Total Candidate keys: 3 (1 mark for the correct table) (1 mark for number of candidate keys)</p>	ADMN	RollNo	Name	PhoneNo	124	1	Chavi	989899	235	2	Arpita	931124	276	3	Chavi	972457	(2)
ADMN	RollNo	Name	PhoneNo															
124	1	Chavi	989899															
235	2	Arpita	931124															
276	3	Chavi	972457															
27.	<p>(I)</p> <p>A) UNIQUE</p> <p style="text-align: center;"><b>OR</b></p> <p>B) NOT NULL (1 mark for correct answer)</p> <p>(II)</p> <p>A) ALTER TABLE MOBILE DROP PRIMARY KEY; OR B) ALTER TABLE MOBILE ADD PRIMARY KEY (M_ID); (1 mark for correct answer)</p>	(2)																
28.	<p>A) Advantage: Network extension is easy. Disadvantage: Failure of switch/hub results in failure of the network. (1 mark for correct Advantage) (1 mark for correct Disadvantage)</p> <p style="text-align: center;"><b>OR</b></p> <p>B) SMTP: Simple Mail Transfer Protocol.</p>	(2)																

	<p>SMTP is used for sending e-mails from client to server.</p> <p><i>(1 mark for correct expansion)</i></p> <p><i>(1 mark for correct usage)</i></p>	
--	--	--

Q No.	SECTION C (3 X 3 = 9)	Marks
29.	<p>(A)</p> <pre>def show():     f=open("Email.txt",'r')     data=f.read()     words=data.split()     for word in words:         if '@cmail' in word:             print(word,end=' ')     f.close()</pre> <p><i>(½ mark for correct function header)</i>  <i>(½ mark for correctly opening the file)</i>  <i>(½ mark for correctly reading from the file)</i>  <i>(½ mark for splitting the text into words)</i>  <i>(1 mark for correctly displaying the desired words)</i></p> <p style="text-align: center;"><b>OR</b></p> <p>(B)</p> <pre>def display_long_words():     with open("Words.txt", 'r') as file:         data=file.read()         words=data.split()         for word in words:             if len(word)&gt;5:                 print(word,end=' ') </pre> <p><i>(½ mark for correct function header)</i>  <i>(½ mark for correctly opening the file)</i>  <i>(½ mark for correctly reading from the file)</i>  <i>(½ mark for splitting the text into words)</i>  <i>(1 mark for correctly displaying the desired words)</i></p>	(3)

<p>30.</p>	<p>(A)</p> <p>(I)</p> <pre>def push_book(BooksStack, new_book):     BooksStack.append(new_book)</pre> <p>(II)</p> <pre>def pop_book(BooksStack):     if not BooksStack:         print("Underflow")     else:         return(BooksStack.pop())</pre> <p>(III)</p> <pre>def peep(BooksStack):     if not BooksStack:         print("None")     else:         print(BooksStack[-1])</pre> <p><i>(3x1 mark for correct function body; No marks for any function header as it was a part of the question)</i></p> <p style="text-align: center;"><b>OR</b></p> <p>(B)</p> <pre>n=int(input("Enter an integer: ")) s=[] #stack f=2 while n&gt;1:     if n%f==0:         s.append(f)         n//=f     else: f+=1 while s:     print(s.pop(),end=' ')</pre> <p><i>(½ mark for correct input)</i></p> <p><i>(½ mark for correctly declaring an empty stack)</i></p> <p><i>(1 mark for correctly pushing the factors on the stack)</i></p> <p><i>(1 mark for correctly popping and displaying the factors)</i></p>	<p>(3)</p>
<p>31.</p>	<p>(A)</p> <p>(I)   select Product, sum(Quantity) from orders           group by product having sum(Quantity)&gt;=5;</p> <p>(II)   select * from orders order by Price desc;</p> <p>(III)  select distinct C_Name from orders;</p> <p><i>(3x 1 mark for each correct query)</i></p>	<p>(3)</p>

	<b>OR</b>	
(B)	(I) select quantity, count(*) from orders group by quantity; (II) delete from orders where product = "Laptop"; (III) select sum(price) from orders where quantity is null; (3x 1 mark for each correct query)	

Q No.	SECTION D (4 X 4 = 16)	Marks
32.	<p>(A)</p> <p>(I) ZeroDivisionError is raised when a statement tries to divide a number by zero. (1 Mark for correct answer)</p> <p>(II)</p> <pre>try:     a=int(input("Enter an integer: "))     print("Reciprocal of the number =",1/a) except ZeroDivisionError:     print("Division by Zero is not allowed") except:     print("Some Error Ocurred")</pre> <p>(3x 1 mark for each correct part – try, except, except)</p> <p style="text-align: center;"><b>OR</b></p> <p>(B)</p> <p>(I) NameError is raised when an undefined identifier is used in the program. (1 Mark for correct answer)</p> <p>(II)</p> <pre>try:     a=eval(input("Enter an integer: "))     print("Reciprocal of the number =",1/a) except NameError:     print("Some name is not defined") except:     print("Some Error Ocurred")</pre> <p>(3x1 Mark for each correct part – try, except, except)</p>	(4)
33.	<p>(I)</p> <pre>def show():     import csv     f=open("happiness.csv",'r')     records=csv.reader(f)     next(records, None) #To skip the Header row     for i in records:         if int(i[1])&gt;5000000:             print(i)</pre>	(4)

	<p>f.close()  <i>(½ mark for opening in the file in right mode)</i>  <i>(½ mark for correctly creating the reader object)</i>  <i>(½ mark for correctly checking the condition)</i>  <i>(½ mark for correctly displaying the records)</i></p> <p>(II)</p> <pre>def Count_records():     import csv     f=open("happiness.csv",'r')     records=csv.reader(f)     next(records, None) #To skip the Header row     count=0     for i in records:         count+=1     print(count)     f.close()</pre> <p><i>(½ mark for opening in the file in right mode)</i>  <i>(½ mark for correctly creating the reader object)</i>  <i>(½ mark for correct use of counter)</i>  <i>(½ mark for correctly displaying the counter)</i></p> <p><b>Note</b> (for both parts (I) and (II)):</p> <p>(i) Ignore <b>import csv</b> as it may be considered the part of the complete program, and there is no need to import it in individual functions.</p> <p>(ii) Ignore <i>next(records, None)</i> as the file may or may not have the Header Row.</p>	
34.	<p>(I) Select * from FACULTY natural join COURSES where Salary&lt;12000;  (II) Select * from courses where fees between 20000 and 50000;  (III) Update courses set fees=fees+500 where CName like '%Computer%';  (IV) (A) Select FName, LName from faculty natural join courses where Came="System Design";</p> <p style="text-align: center;">OR</p> <p>(B) Select * from FACULTY, COURSES;</p> <p><i>(4x1 mark for each correct query)</i></p>	(4)
35.	<pre>def Add_Item():     import mysql.connector as mycon     mydb=mycon.connect(host="localhost",user="root",         passwd="Pencil",database="ITEMDB")     mycur=mydb.cursor()     no=input("Enter Item Number: ")     nm=input("Enter Item Name: ")     pr=input("Enter price: ")     qty=input("Enter qty: ")     query="INSERT INTO stationery VALUES ({},'{}',{},{})"</pre>	(4)

	<pre> query=query.format(no,nm,pr,qty) mycur.execute(query) mydb.commit() mycur.execute("select * from stationery where price&gt;120") for rec in mycur:     print(rec) </pre> <p> <i>(½ mark for correctly importing the connector object)</i>  <i>(½ mark for correctly creating the connection object)</i>  <i>(½ mark for correctly creating the cursor object)</i>  <i>(½ mark for correctly inputting the data)</i>  <i>(½ mark for correct creation of first query)</i>  <i>(½ mark for correctly executing the first query with commit)</i>  <i>(½ mark for correctly executing the second query)</i>  <i>(½ mark for correctly displaying the data)</i> </p>	
--	---	--

Q No.	SECTION E (2 X 5 = 10)	Marks
36.	<p><b>Note:</b> For part (I), the student can mention any type of file with valid reason to support the choice. Answer with valid supporting reason should be considered Correct, and without a valid reason should be considered incorrect.</p> <p>(I) Text file: A text file allows for easy maintenance of data, as it can be opened and manipulated with any text editor also.  <i>(1 mark for correct answer)</i></p> <p>(II)</p> <pre> def append():     with open("Candidates.txt",'a') as f:         C_id=input("Enter Candidate ID: ")         C_nm=input("Enter Candidate name: ")         C_dg=input("Enter Designation: ")         C_ex=input("Enter Experience: ")         rec=C_id+','+C_nm+','+C_dg+','+C_ex+'\n'         f.write(rec) </pre> <p> <i>(½ mark for opening in the file in right mode)</i>  <i>(½ mark for correctly inputting the data)</i>  <i>(½ mark for correctly writing the record in the file)</i>  <i>(½ mark for correctly closing the file, or ½ mark if the file was opened using with)</i> </p> <p>(II)</p> <pre> def display():     with open("Candidates.txt") as f:         for rec in f:             data=rec.split(',')             if float(data[-1])&gt;10: </pre>	(5)

print(rec.strip()) #OR print(rec)

*(½ mark for opening the file in right mode)*

*(½ mark for correctly reading the data)*

*(½ mark for correctly checking the condition)*

*(½ mark for correctly displaying the records)*

**OR**

(I) CSV File: A CSV file allows for easy maintenance of data, as it can be opened and manipulated with any spreadsheet application also.

*(1 mark for correct answer)*

(II)

```
def append():
    with open("Candidates.csv",'a',newline=") as f:
        C_id=input("Enter Candidate ID: ")
        C_nm=input("Enter Candidate name: ")
        C_dg=input("Enter Designation: ")
        C_ex=input("Enter Experience: ")
        rec=[C_id,C_nm,C_dg,C_ex]
        w=csv.writer(f)
        w.writerow(rec)
```

*(½ mark for opening in the file in right mode)*

*(½ mark for correctly inputting the data)*

*(½ mark for correctly writing the record in the file)*

*(½ mark for correctly closing the file, or ½ mark if the file was opened using with)*

(III)

```
def display():
    with open("Candidates.csv") as f:
        r=csv.reader(f)
        for rec in r:
            if float(rec[-1])>10:
                print(rec)
```

*(½ mark for opening the file in right mode)*

*(½ mark for correctly reading the data)*

*(½ mark for correctly checking the condition)*

*(½ mark for correctly displaying the records)*

**OR**

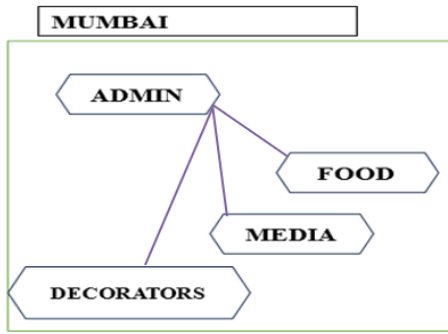

(I) Binary File: A binary file cannot be opened and manipulated with any general purpose application, and hence, it prevents any unintentional change in the data.

*(1 mark for correct answer)*

(II)

```
def append():
```

	<pre> with open("Candidates.dat",'ab') as f:     C_id=int(input("Enter Candidate ID: "))     C_nm=input("Enter Candidate name: ")     C_dg=input("Enter Designation: ")     C_ex=float(input("Enter Experience: "))     rec=[C_id,C_nm,C_dg,C_ex]     pickle.dump(rec,f) </pre> <p><i>(½ mark for opening in the file in right mode)</i>  <i>(½ mark for correctly inputting the data)</i>  <i>(½ mark for correctly writing the record in the file)</i>  <i>(½ mark for correctly closing the file, or ½ mark if the file was opened using with)</i></p> <p>(III)</p> <pre> def display():     with open("Candidates.dat",'rb') as f:         while True:             try:                 rec=pickle.load(f)                 if rec[-1]&gt;10:                     print(rec)             except EOFError:                 break </pre> <p><i>(½ mark for opening the file in right mode)</i>  <i>(½ mark for correctly reading the data)</i>  <i>(½ mark for correctly checking the condition)</i>  <i>(½ mark for correctly displaying the records)</i></p>	
37.	<p>(I) MEDIA Block as it has the maximum number of Computers.  <b>OR</b>  ADMIN Block as ADMIN block is generally the most secure.  <i>(1 mark for correct answer)</i></p> <p>(II) Switch  <i>(1 mark for correct answer)</i></p> <p>(III)</p>	(5)

(or Any other correct layout)

Cable: Optical Fibre

*( $\frac{1}{2}$  mark for correct layout +  $\frac{1}{2}$  mark for correct table type)*

(IV) There is no requirement of the Repeat as the optical fibre cable used for the network can carry the data to much longer distances than within the campus.

*(1 mark for correct answer)*

(V) (A) a) Video Conferencing

OR

(B) LAN

*(1 mark for correct answer)*
