LEGAL
APTITUDE[Raise / View
Objection](#)

Vicarious Liability is a legal principle where one person is held liable for the tort committed by another. This typically occurs in a "Master-Servant" relationship. For the Master to be held liable, two conditions must be met: (1) There must be a formal master-servant relationship, and (2) The tortious act must be committed by the servant "in the course of employment."

An act is considered within the "course of employment" if it is either a wrongful act authorised by the master, or a wrongful and unauthorised mode of doing some act authorised by the master. However, if a servant performs an act that is totally unconnected to their job (a "frolic of their own"), the master is not liable. Furthermore, an independent contractor is different from a servant; a master is generally not liable for the torts of an independent contractor because the master lacks the right to control *how* the work is done.

A, a truck driver employed by B, was instructed to deliver goods to a warehouse. While driving, A took a short detour to buy a gift for his wife and hit a pedestrian.

Is B liable?

308691	No, because buying a gift is not a part of A's job.
308692	Yes, because the detour was a minor deviation and A was still on duty.
308693	Yes, because B owns the truck.
308694	No, because A disobeyed instructions to go directly to the warehouse.

Correct Option: 308692

Candidate Response: 308692

Correct Option: 308692

However, if a servant performs an act that is totally unconnected to their job (a "frolic of their own"), the master is not liable. Furthermore, an independent contractor is different from a servant; a master is generally not liable for the torts of an independent contractor because the master lacks the right to control *how* the work is done.

A school hires a private bus company to transport students. The bus driver, employed by the bus company, drives negligently and injures a student. Who is vicariously liable?

- | | |
|--------|--|
| 308695 | The School, because the students belong to them. |
| 308696 | The Bus Company, as the driver is their servant. |
| 308697 | Both the School and the Bus Company. |
| 308698 | No one, except the driver personally. |

Correct Option: 308696

LEGAL
APTITUDE**Legal Principle**

One has right to defend his life and property against criminal harm provided it is not possible to approach public authorities and more harm than necessary has not been caused to avert the danger

On the basis of the above principle read the following factual situation and answer the question

FACTUAL SITUATION- THE FARM OF X ON OUTSKIRTS OF THE DELHI WAS ATTACKED BY A GANG OF ARMED ROBBERS. X WITHOUT INFORMING THE POLICE, AT FIRST WARNED THE ROBBERS BY FIRING IN THE AIR. AS THEY WERE FLEEING FROM THE FARM, HE FIRED AND KILLED ONE OF THEM. AT THE TRIAL-

1. X can avail the right of private defense as he was defending his life and property.
2. X cannot avail the right as he failed to inform the police.
3. X cannot avail the right as he caused more harm than was necessary to ward off the danger.
4. X can avail of the right as at first he only fired in the air.

Select the appropriate answer.

308747	1 and 4
308748	2 only
308749	2 and 3

Legal Principle

One has right to defend his life and property against criminal harm provided it is not possible to approach public authorities and more harm than necessary has not been caused to avert the danger

On the basis of the above principle, read the factual situation and answer the question.

FACTUAL SITUATION- 'W' ON RETURNING HOME LATE AFTER WORK WAS ACCOSTED BY AN ARMED VAGABOND WHO TRIED TO ROB HER PURSE AND VALUABLES AT KNIFE POINT. 'W' RAISED AN ALARM BUT WAS UNSUCCESSFUL IN OBTAINING HELP. IN THE ENSUING STRUGGLE 'W' SNATCHED THE KNIFE FROM THE BRIGAND AND KILLED HIM. AT THE TRAIL 'W'-

1. Can claim the right to private defense as she was defending her life and property.
2. Can claim private defense as she tried to obtain help but could not approach public authorities.
3. Cannot claim private defense as to defend a few valuables a person cannot be killed.
4. Cannot claim private defense as it was her own fault that she was coming home late at night.

Ten people are sitting in two parallel rows containing five people each, in such a way that there is an equal distance between adjacent persons.

- Row-1 (facing South): J, K, L, M, and N.
- Row-2 (facing North): A, E, G, H, and I.

The following conditions apply:

1. J sits at one of the extreme ends and is three places away from A (who is in the opposite row).
2. K and N are not immediate neighbours; exactly two people sit between them.
3. G and E are immediate neighbours, and G faces K.
4. L sits at the other extreme end of Row-1.

Question: Based on the seating arrangement above, which of the following statements is NOT true ?

- A. Exactly two people sit between K and N in Row-1.
- B. G is an immediate neighbour of E.
- C. L sits opposite to M.
- D. J is three places away from A in the same row.

202187

ENGLISH

Read the following passage carefully and answer the questions below.

Comprehension Passage: *Right to Education*

The Right to Education (RTE) Act, enacted in India in 2009, marked a significant milestone in the country's educational landscape. It mandates free and compulsory education for children between the ages of 6 and 14. The Act recognizes education as a fundamental right and aims to bridge the gap between privileged and underprivileged sections of society.

Under RTE, private schools are required to reserve 25% of seats for children from economically weaker sections. This provision seeks to promote inclusivity and reduce social disparities. However, challenges such as lack of infrastructure, shortage of trained teachers, and uneven implementation across states continue to hinder its effectiveness.

Despite these hurdles, the Act has empowered millions of children to access formal education. It has also sparked debates on quality versus quantity, and the role of government in ensuring equitable learning opportunities.

What is the primary objective of the Right to Education Act?

309055	To provide free education to college students
309056	To ensure free and compulsory education for children aged 6–14
309057	To privatize education
309058	To promote online learning platforms

Correct Option: 309056

ENGLISH

Read the passage given below carefully and answer the question that follows :

Nature has all along yielded to us, humans. First, we took nature's materials as food, fibers, and shelter. Then we learned to extract raw materials from her biosphere to create our own new synthetic materials. Now Bios is yielding us her mind—we are taking her logic. Clockwork logic—the logic of the machines—will only build simple contraptions. Truly complex systems such as a cell, a meadow, an economy, or a brain (natural or artificial) require a rigorous non technological logic. We now see that no logic except bio-logic can assemble a thinking device, or even a workable system of any magnitude.

It is an astounding discovery that one can extract the logic of Bios out of biology and have something useful. Although many philosophers in the past suspected one could abstract the laws of life and apply them elsewhere, it wasn't until the complexity of computers and human-made systems became as complicated as living things, that it was possible to prove this. It's eerie how much of life can be transferred. So far, some of the traits of the living that have successfully been transported to mechanical systems are: self-replication, self-governance, limited self-repair, mild evolution, and partial learning.

We have reason to believe yet more can be synthesized and made into something new. Yet at the same time that the logic of Bios is being imported into machines, the logic of Technos is being imported into life. The root of bioengineering is the desire to control the organic long enough to improve it. Domesticated plants and animals are examples of technology applied to life. The wild aromatic root of the Queen Anne's lace weed has been fine-tuned over generations by selective herb gatherers until it has evolved into a sweet carrot of the garden; the udders of wild bovines have been selectively enlarged in a "unnatural" way to satisfy humans rather than calves. Milk cows and carrots, therefore, are human inventions as much as steam engines and gunpowder are. But milk cows and carrots are more indicative of the kind of inventions humans will make in the future: products that are grown rather than manufactured.

Genetic engineering is precisely what cattle breeders do when they select better strains of Holsteins, only bioengineers employ more precise and powerful control. While carrot and milk cow breeders had to rely on diffuse organic evolution, modern genetic engineers can use directed artificial evolution—purposeful design—which greatly accelerates improvements.

The overlap of the mechanical and the lifelike increases year by year. Part of this bionic convergence is a matter of words. The meanings of "mechanical" and "life" are both stretching until all complicated things can be perceived as machines, and all self-sustaining machines can be perceived as alive.

Yet beyond semantics, two concrete trends are happening:

- (1) Human-made things are behaving more lifelike, and
- (2) Life is becoming more engineered. The apparent veil between the organic and the manufactured has crumpled to reveal that the two really are, and have always been, of one being.

None of the following is implied by the arguments of the passage, EXCEPT :

309075

The biological realm is not as complex as the mechanical one; which is why the logic of Bios is being imported into machines

309076

Purposeful design represents the pinnacle of scientific expertise in the service of human betterment and civilisational progress

309077

Historically, philosophers have known that the laws of life can be abstracted and applied elsewhere

309078

Genetic engineers and bioengineers are the same in so far as they both seek to force evolution in an artificial way.

We now see that no logic except bio-logic can assemble a thinking device, or even a workable system of any magnitude.

It is an astounding discovery that one can extract the logic of Bios out of biology and have something useful. Although many philosophers in the past suspected one could abstract the laws of life and apply them elsewhere, it wasn't until the complexity of computers and human-made systems became as complicated as living things, that it was possible to prove this. It's eerie how much of life can be transferred. So far, some of the traits of the living that have successfully been transported to mechanical systems are: self-replication, self-governance, limited self-repair, mild evolution, and partial learning.

We have reason to believe yet more can be synthesized and made into something new. Yet at the same time that the logic of Bios is being imported into machines, the logic of Technos is being imported into life. The root of bioengineering is the desire to control the organic long enough to improve it. Domesticated plants and animals are examples of technology applied to life. The wild aromatic root of the Queen Anne's lace weed has been fine-tuned over generations by selective herb gatherers until it has evolved into a sweet carrot of the garden; the udders of wild bovines have been selectively enlarged in a "unnatural" way to satisfy humans rather than calves. Milk cows and carrots, therefore, are human inventions as much as steam engines and gunpowder are. But milk cows and carrots are more indicative of the kind of inventions humans will make in the future: products that are grown rather than manufactured.

Genetic engineering is precisely what cattle breeders do when they select better strains of Holsteins, only bioengineers employ more precise and powerful control. While carrot and milk cow breeders had to rely on diffuse organic evolution, modern genetic engineers can use directed artificial evolution—purposeful design—which greatly accelerates improvements.

The overlap of the mechanical and the lifelike increases year by year. Part of this bionic convergence is a matter of words. The meanings of "mechanical" and "life" are both stretching until all complicated things can be perceived as machines, and all self-sustaining machines can be perceived as alive.

Yet beyond semantics, two concrete trends are happening:

- (1) Human-made things are behaving more lifelike, and
- (2) Life is becoming more engineered. The apparent veil between the organic and the manufactured has crumpled to reveal that the two really are, and have always been, of one being.

The author claims that, "Part of this bionic convergence is a matter of words". Which one of the following statements best expresses the point being made by the author ?

309083

"Bios" and "Technos" are both convergent forms of logic, but they generate meanings about the world that are mutually exclusive.

309084

"Mechanical" and "life" were earlier seen as opposite in meaning, but the difference between the two is increasingly blurred.

309085

"Mechanical" and "life" are words from different logical systems and are, therefore, fundamentally incompatible in meaning.

309086

A bionic convergence indicates the meeting ground of genetic engineering and artificial intelligence.
