- 1. \_\_\_\_\_ in a hydro power plant is used to discharge surplus water on the downstream side of a dam.
  - (A) Surge tank
  - (C) Penstock
- (D) Economizer
  - 2. Which of the following statement is true about hydroelectric power plant?
    - (A) Hydroelectric power plants are multipurpose
    - (B) Water is used as fuel in hydroelectric power plant
    - (C) Hydroelectric power plant has high running cost
- - (D) Due to non-uniform flow of water frequency control in such plants is very difficult

- 3. A canal is 80 km long and has an average surface width of 15 m. If the evaporation measured in a class A pan is 0.5 cm/day, the volume of water evaporated in a month of 30 days is (in m<sup>3</sup>)
  - (A) 12600 (B) 126000 -(C) 180000 (D) 18000  $30 \times 1000 \times 15 \times 30^{1} \times 30^{1} \times 30^{1} \times 30^{1} \times 1000$   $1200 \times 1500$   $1200 \times 1500$  $1200 \times 1500$
- When the hydraulic jump is in a moving form it is called
  - (A) Negative surge
  - (B) Accelerated surge
  - (C) Turbulent surge
  - (D) Positive surge
- For a given specific energy E, the critical depth y<sub>c</sub> for a rectangular channel is given by
  - (A)  $y_c = 3/2E$
  - (B)  $y_c = 3/4E$

(C) 
$$y_c = 4/5E$$
  
(D)  $y_c = 2/3E$ 

22/AE/CM/M-2024-06/B

 $Q = C_D. A^{2/3}$

flow

- - 10. A fall is constructed to
    - (A) Create surplus energy
    - (B) Maintain surplus energy
    - (C) Overcome surplus energy
    - (D) Destroy the surplus energy
- 11. The erosion between shoulder and pavement leads to

∎¢∎ (A) Drop ∎r×

- (B) Flat drop
- -(C) Edge drop
- (D) Break down
- 12. In deriving the equation for the hydraulic jump in a rectangular channel in terms of conjugate depths and initial Froude number
  - (A) Energy and continuity equations are used
  - (B) Energy, momentum and continuity equations are used
- - (C) Continuity and momentum equations are used
  - (D) Only continuity equation is used
- 22/AE/CM/M-2024-06/B

- 13. Which of the following zone in zoned type embankment prevents piping through cracks ?
  - (A) Central core
  - (B) Core wall
  - (C) Outer zone
  - (D) Transition zone

- 14. A detention basin for flood control is the one which is provided with
  - (A) Uncontrolled outlet and spillways
  - (B) Controlled outlet and spillways
  - (C) Controlled outlet but uncontrolled spillways
  - (D) Uncontrolled outlet but controlled spillways
- 15. What is the purpose of a Travel Time

and Delay Study ?

- (A) To evaluate the traffic stream
- (B) To assess the time taken to travel by various vehicles
- (C) To assess the quality of traffic movement
- (D) For survey data

4

16. Which of the following method is used to forecast the population of old and very large city ?

(A) Arithmetical increase method

- (B) Logistic curve method
- (C) Graphical method
- (D) Geometric progression method
- 17. Most efficient channel section is
  - (A) Half hexagon in the form of trapezoid
  - (B) Semicircular
  - (C) Rectangular
  - (D) Triangular
- 18. Which has the flexibility to turn 360° with the port axis ?
  - (A) Plug
- (B) Reducer (C) Elbow connector
  - (D) Banjo connector
- 22/AE/CM/M-2024-06/**B**

- 19. An irrigation project is classified as a major project when the Culturable Command Area (CCA) involved in the project is more than
  - (A) 2500 hectares
  - (B) 5000 hectares

- (C) 2000 hectares
- (D) 10000 hectares
- 20. If the value of rate of change of specific energy is  $7.79 \times 10^{-4}$  m and
  - $S_f = 0.00013$ , the value of bed slope is
  - (A) 1 in 1000
  - (B) 1 in 1300
  - (C) 1 in 1200
    - (D) 1<sub>c</sub>in 1100
  - 21. The hydraulic structure which controls the supply to an off-taking channel from the parent channel is
    - (A) Distributary head regulator
    - (B) Canal escape
    - (C) Cross regulator

(D) Canal fall

[ P.T.O.

5

- 22. An existing flexible pavement that develops extensive cracks is called
  - (A) Alligator cracks
  - (B) Pot hole
  - (C) Shear
- Ravelling
- 23. Out of 120 cm of water pumped into a canal, 80 cu m of water could be supplied to a field. 60 cu m of water was stored in the root zone while water required in root zone prior to irrigation was 80 cu m. The storage efficiency of irrigation is

→(A) 75% ·

- ✓(B) 50%(C) 100%
- (D) 66.67%

aximum thickness of expansi

20

60 "

Supplied

- 24. The maximum thickness of expansion joint in rigid pavements is
  - (A) Zero
- (B) 100 mm (C) 50 mm (D) 25 mm

#### $22/AE/CM/M-2024-06/\mathbf{B}$

- **25.** Which type of bacteria is used in trickling filters ?
  - (A) Facultative
  - (B) Blue-green bacteria
  - (C) Anaerobic
  - (D) Nitrifying
- 26. In trapezoidal weir, sides are inclined outward with a slope of
  - -(A) 1:4
  - (B) 1:3
  - (C) 1:6

(D) 1:5

- 27. Which type of open well is suitable when the sub-soil is formed of gravel or coarse sand deposits ?
  - (A) Unlined wells
  - (B) Temporary wells

- (C) Wells with impervious lining
- (D) Wells with pervious lining
- 6

- Aeration of water is done to remove
- (A) Odour
- (B) Hardness

(C) Bacteria

(D) Colour

29. As per IRC 37, the maximum volume of traffic (in a vehicle per hour) entering from all legs of the rotary intersection can be handled efficiently is

- (A) 1000
- (B) 5000
- (C) 3000
- (D) 2000
- 30. Which of the following conditions is the chief characteristic of critical flow ?

C.FR

- $(A) \quad Q^2T/gA^3 = 1$
- (B)  $Q^2T^2/gA^3 = 1$ 
  - (C)  $Q^2R/gA^3 = 1$ 
    - (D)  $QT^2/gA^2 = 1$
- 22/AE/CM/M-2024-06/B

- **31.** Which of the following is a method used to estimate potential evapotranspiration ?
  - (A) Hazen-Williams equation
    - (B) Thornthwaite equation
    - (C) Chezy's equation
    - (D) Manning's equation

- **32.** Which of the following is false about rapid gravity type filters used for water purification ?
  - (A) Skilled supervision is essential  $\checkmark$
  - (B) Coagulation is not essential
  - (C) Depreciation of plant is high
  - (D) Operational cost is high 🗸
  - **33.** The design period for a water supply project is taken as
    - (A) 5 to 10 years
    - (B) 20 to 30 years

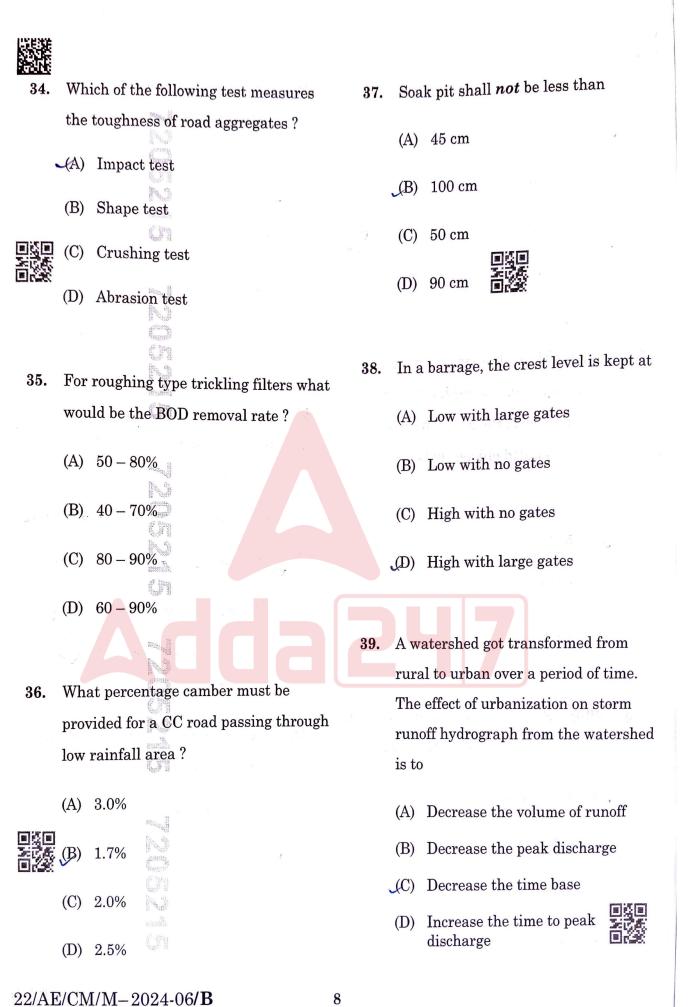

- (C) 15 to 20 years
- (D) 10 to 15 years

7

[ P.T.O.

- In designing Imhoff tanks, the usual retention period is
  - (A) 2 hours
  - (B) 20 hours
  - (C) 14 hours
- D) 8 hours
- rs
- 41. Which of the following method is widely used in India for the computation of consumptive use ?
  - (A) Blaney Criddle equation
  - (B) Penman's equation
  - (C) Tanks and Lysimeter
  - (D) None of the above
- 42. The highest CBR number is required for

in the second

- (A) Pavement
- (B) Base
- (C) Sub base(D) Sub grade

1. 2.300

22/AE/CM/M-2024-06/B

- **43.** Which of the following is *not* a classification of traps based on their shape ?
  - (A) P-trap
  - (B) W-trap
    - (C) S-trap
  - (D) Q-trap
- **44.** In distribution pipes, drain valves are provided at
  - (A) Lower point
  - (B) Any where
  - (C) Junction points
  - (D) Higher point
- 45. What is the cross sectional shape of shallow surface drains ?
  - (A) Triangular
    - (B) Trapezoidal
    - (C) Rectangular

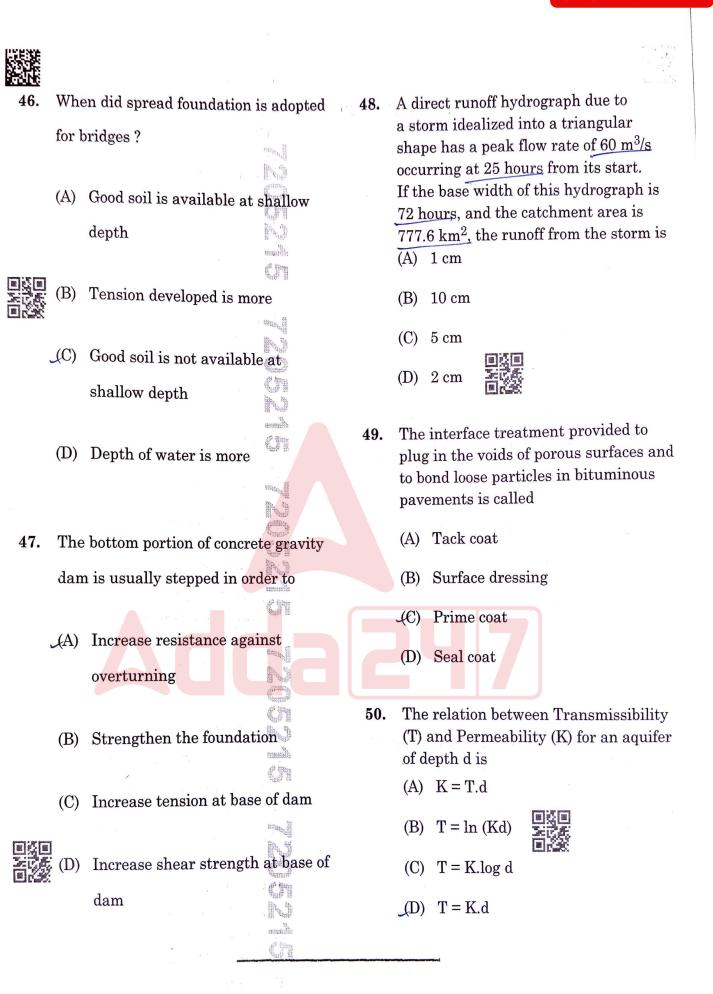

(D) Circular
