**Directions (Question No. 115 to 119):** Read the following passage and choose the correct answer:

Climate change is one of the most pressing environmental issues of our time. It refers to long-term shifts in temperatures and weather patterns, primarily caused by human activities, especially the burning of fossil fuels like coal, oil, and gas. These activities release greenhouse gases into the atmosphere, trapping heat and leading to a gradual warming of the Earth's surface—a phenomenon known as global warming.

The consequences of climate change are far-reaching. Rising global temperatures have led to the melting of glaciers and polar ice caps, resulting in rising sea levels that threaten coastal communities. Extreme weather events, such as heatwaves, floods, and hurricanes, are becoming more frequent and intense. In many regions, agricultural productivity is being affected, leading to concerns over food security.

To combat climate change, international cooperation is vital. Agreements like the Paris Agreement aim to limit global warming to well below 2°C above pre-industrial levels. Countries are encouraged to reduce their carbon emissions, invest in renewable energy, and adapt to changes that are already inevitable.

115. What is the main goal of the Paris Agreement?

- (A) To eliminate fossil fuel use completely
- (B) To limit global warming to below 2°C
- (C) To ban all greenhouse gases
- (D) To encourage deforestation for development
