Comprehension:

Read the following passage and answer the questions that follow.

Living as we do with mass-produced food, markets and restaurants in every town, and giant supermarket complexes that are often just down the road, it takes some imagination to think of finding food every day in the natural environment. Yet that is just what humans (Homo sapiens) have done for most of their time on Earth — from their appearance about 200,000 years ago until about 11,000 years ago when they began to develop agriculture. Before Homo sapiens evolved, our hominine ancestors foraged for millions of years.

Foraging means relying on food provided by nature through the gathering of plants and small animals, birds and insects; scavenging animals killed by other predators; and hunting. The word foraging can be used interchangeably with 'hunting and gathering.'

Humans are not the only creatures who forage; many animals do too. What is different about human foraging? Answers may vary, but the common idea would be that humans, by means of our ability to communicate verbally, accumulated knowledge, passed it on to younger generations and worked together cooperatively. These skills enabled humans to gradually refine their foraging methods, further distinguishing us from some of our competitors in the animal kingdom.

In fact, one could say that foraging made us human. As fruit trees in the rain forest became less abundant in the cooling, drying climate, the hominines who survived had to find other food sources. As they did, many traits evolved: walking on two feet (bipedalism), loss of most hair, smaller intestines, larger brains and better communication. These are essentially the hallmarks of being human.

SubQuestion No : 11

Q.11 Which of the following does the writer NOT mention as a trait of being human?

Ans   ✗ 1. Having larger brains

      ✔ 2. Engaging in social activities

      ✗ 3. Communicating with fellow beings

      ✗ 4. Walking erect on both feet
