**Question Numbers:** (76 to 80)

Question Label: Comprehension

Read the given passage and answer the following questions.

- Scientists have discovered a trove of forty-four planets in solar systems beyond our own in one go, dwarfing the usual number of confirmations from extrasolar surveys.
- The findings will improve existing models of solar systems, and may help researchers investigate exoplanet atmospheres.
- Novel techniques developed to validate the find could accelerate the confirmation of more extrasolar planet candidates.
- Astronomers pooled data from NASA's Kepler and the ESA's Gaia space telescopes. They confirmed the existence of these 44 exoplanets and described various details about them.
- 5. A portion of the findings yield some surprising characteristics. "For example, four of the planets orbit their host stars in less than 24 hours," said John Livingston, a graduate student at the University of Tokyo in Japan. "In other words, a year on each of those planets is shorter than a day here on Earth," said Livingston, lead author of the study.
- These contribute to a small but growing list of "ultrashort-period" planets, suggesting that they could be more common than previously believed.
- 7. "Sixteen were in the same size class as Earth, one in particular turning out to be extremely small about the size of Venus which was a nice affirmation, as it's close to the limit of what is possible to detect," said Livingston.
- Scientists hope to understand what kinds of planets might be out there, but can only draw valid conclusions if there are enough planets for robust statistical analysis.
- The addition of a large number of new planets, therefore, leads directly to a better theoretical understanding of solar system formation, researchers said.
- 10. The planets also provide good targets for detailed individual studies to yield measurements of planetary composition, interior structure and atmospheres - in particular, the 18 planets in several multi-planet systems.
- 11. "The investigation of other solar systems can help us understand how planets and even our own solar system formed. The study of other worlds has much to teach us about our own," said Livingston.

Sub questions

Question Number: 76 Question Id: 7230532532 Question Type: MCQ Option Shuffling: Yes Display Question Number: Yes Single Line Question Option: No Option Orientation: Vertical

Correct: 1 Wrong: 0.25

Which of the following options best paraphrases paragraph 3 of this article?

New scientific techniques that have been developed could confirm the existence of other planets in other solar systems that have so far only been mere speculations.

New scientific techniques that have already been used to confirm the existence of other planets in other solar systems could be used more extensively to confirm the existence of many more such planets.

New scientific techniques that have been developed could confirm the existence of other planets in our own solar system that has so far been believed to have only 9 planets.

New scientific techniques that have been developed could confirm the existence of other planets in other solar systems that have already been spotted and reported on.

Question Number: 77 Question Id: 7230532533 Question Type: MCQ Option Shuffling: Yes Display Question Number: Yes Single Line Question Option: No Option Orientation: Vertical

Correct: 1 Wrong: 0.25

Which of the following is NOT mentioned in the passage as one of the beneficial results of the findings?

# **Options:**

The findings will help improve the understanding of how planetary systems were formed.

The findings will help to understand the structure and composition of planets and their atmospheres.

The findings will help to understand our own planet and solar system better.

The findings will help to identify other inhabitable planets to which human beings could move.

Which of the following options best explains the phrase "ultrashort period planet"?

## **Options:**

It is a planet that revolves around its sun in less

- than 24 hours.
- It is a planet that has a short span of life.

It is a planet with a very short orbit around its host

- star.
- It is a planet that is much smaller than Venus.

Correct: 1 Wrong: 0.25

Which of the following statements about this particular study of exoplanets may be inferred from the passage?

The existence of exoplanets and the characteristics of these planets were already known to researchers and the study only confirmed whatever information they already knew.

The existence of exoplanets was not known to researchers and this study revealed this new facet

of the universe to researchers.

The existence of exoplanets was known to researchers but the study revealed that they may be more in number than previously suspected and that they may exhibit some surprising

characteristics.

The existence of exoplanets has been confirmed by the study and their characteristics have been thoroughly analysed by the research team.

Question Id: 7230532531 Question Type: COMPREHENSION Sub Question Shuffling Allowed: Yes Group Comprehension

Questions: No

**Question Numbers: (76 to 80)** 

Question Label: Comprehension

Read the given passage and answer the following questions.

- Scientists have discovered a trove of forty-four planets in solar systems beyond our own in one go, dwarfing the usual number of confirmations from extrasolar surveys.
- The findings will improve existing models of solar systems, and may help researchers investigate exoplanet atmospheres.
- Novel techniques developed to validate the find could accelerate the confirmation of more extrasolar planet candidates.
- Astronomers pooled data from NASA's Kepler and the ESA's Gaia space telescopes. They confirmed the existence of these 44 exoplanets and described various details about them.
- 5. A portion of the findings yield some surprising characteristics. "For example, four of the planets orbit their host stars in less than 24 hours," said John Livingston, a graduate student at the University of Tokyo in Japan. "In other words, a year on each of those planets is shorter than a day here on Earth," said Livingston, lead author of the study.
- These contribute to a small but growing list of "ultrashort-period" planets, suggesting that they could be more common than previously believed.
- 7. "Sixteen were in the same size class as Earth, one in particular turning out to be extremely small about the size of Venus which was a nice affirmation, as it's close to the limit of what is possible to detect," said Livingston.
- Scientists hope to understand what kinds of planets might be out there, but can only draw valid conclusions if there are enough planets for robust statistical analysis.
- The addition of a large number of new planets, therefore, leads directly to a better theoretical understanding of solar system formation, researchers said.
- 10. The planets also provide good targets for detailed individual studies to yield measurements of planetary composition, interior structure and atmospheres - in particular, the 18 planets in several multi-planet systems.
- 11. "The investigation of other solar systems can help us understand how planets and even our own solar system formed. The study of other worlds has much to teach us about our own," said Livingston.

Which of the following options best paraphrases paragraph 3 of this article?

New scientific techniques that have been developed could confirm the existence of other planets in other solar systems that have so far only been mere speculations.

New scientific techniques that have already been used to confirm the existence of other planets in other solar systems could be used more extensively to confirm the existence of many more such planets.

New scientific techniques that have been developed could confirm the existence of other planets in our own solar system that has so far been believed to have only 9 planets.

New scientific techniques that have been developed could confirm the existence of other planets in other solar systems that have already been spotted and reported on.

नीचे दिये गए गद्यांश को पढ़कर पूछे गये प्रश्नों के उत्तर दीजिए। जैनेंद्र, अन्नेय और इलाचंद्र जोशी, कहानी की उस धारा का प्रतिनिधित्व करते हैं जो सामाजिक यथार्थ का चित्रण करने वाली धारा के समानांतर बह रही थी। इन पर फायड के चेतन-अचेतन सिद्धांत का प्रभाव दिखाई पड़ता है। इन कहानीकारों के यहाँ सामाजिक विषमता के प्रति आक्रोश का अभाव नहीं है। जैनेंद्र की कहानी एक रात असामान्य काम भावना की कहानी है। जैनेंद्र का पहला कहानी संग्रह फाँसी 1929 ई. में प्रकाशित हुआ है। जैनेंद्र किसी स्थित को सहज तौर पर नहीं प्रस्तुत करते। उसमें दार्शनिकता का पुट अवश्य होता है। अन्नेय ने आतंकवादी पात्रों के अतिरिक्त विदेशी वातावरण की कहानियाँ भी लिखी हैं। उनकी प्रारंभिक कहानियों का संग्रह विपथगा 1937 ई. में निकला था। वे वातावरण और पात्रों की मनःस्थिति को परस्पर घुला देने में सिद्धहस्त हैं। इलाचंद्र जोशी की प्रारंभिक कहानियों में सामाजिक यथार्थ को प्रकट करने का आग्रह मिलता है, किंतु सन् 35-36 तक उन पर फायड के

मनोविश्लेषण का गहरा असर पड़ गया। उनके कुछ कहानी-संग्रह इस

प्रकार हैं- धूपरेखा (1935 ई.), दीवाली और होली (1942 ई.), आहृति

(1954 ई.)। जोशी में सामाजिक विषमता के प्रति आक्रोश के अलावा

समझ न आ पाने वाली स्थितियों के प्रति रहस्य-भावना भी मिलती है।
