	Read the given passage carefully and answer the questions that follow.
	Modern environmentalism, once rooted in conservation and wilderness preservation, has evolved into a complex global movement confronting climate change, economic inequality, and indigenous rights. Its goals are no longer confined to saving endangered species or protecting remote ecosystems; rather, it now addresses how resource exploitation disproportionately affects marginalised populations. Critics argue that environmental advocacy sometimes ignores socioeconomic realities, imposing blanket solutions that disregard local contexts. Yet increasingly, grassroots leaders—especially from the Global Sout—are reshaping the conversation, emphasising environmental justice over abstract preservation. This paradigm shift underscores the need for inclusive frameworks that integrate ecological integrity with social equity. Activism today must confront power imbalances within global capitalism, where pollution and exploitation are outsourced to vulnerable regions. The green future cannot be envisioned without grappling with historical injustices. Thus, environmentalism's trajectory is no longer merely ecological—it is political, ethical, and intersectional, demanding redefinition in light of interconnected planetary and human crises.
