Question:
What was the respective ratio between the initial quantities of milk and water?

Statements:
(I) After taking out 35 litres of the mixture, the remaining quantity of milk in the mixture was six times that of water.
(II) When one-fourth of the mixture is taken out, the respective ratio between the resultant quantities of milk and water was 6 : 1.

Ans ✔ 1. Data in either statement I alone or statement II alone is sufficient to answer the question.

✘ 2. Data in statement I alone is sufficient to answer the question, while data in statement II is not sufficient.

✘ 3. Data in statement II alone is sufficient to answer the question, while data in statement I is not sufficient.

✘ 4. Data in statements I and II together is sufficient to answer the question.

Q.25 **Read the following information carefully and answer the question that follows. You must assume everything in the information to be true.**
On an average, people who regularly volunteer live longer than those who do not.
Endorphins, natural opiates of the brain, have been proven to be released when people engage in 'doing good', a category that undoubtedly includes volunteering.
There must be a connection because endorphins are known to help people live longer when they are released regularly.
Which of the following conclusions logically follow(s) from the given information?
I) Endorphins are released only when people engage in volunteering activities.
II) There are other ways in which people can engage in 'doing good'.

Statement (1): It is used for measuring resistance in the range of few ohms to several mega ohm.
Statement (2): It provides high accuracy in the measurement of low resistance.
Statement (3): It is modification of Wheatstone bridge circuit.
Which of the statement is/are FALSE.

Ans
✗ 1. Only statement (2).
✗ 2. Only statement (3).
✓ 3. Only statement (1).
✗ 4. Only statement (1) and statement (3).
