Read the short passage below and answer the questions that follow.

Sense of the usage, culture is growing of a plant or garden, not the eradication of it. Anthropologists opine that it is the way of life of a particular people living together in a society, made visible in their arts, social system, habits and customs and religion. Overall, it is a reflection of the institutions, manners, standards, tastes, morals and beliefs. Families play a major role in the upbringing of a child, rather than by any academic institutions. Therefore, when family bond fails to play its part, the child deteriorates. It is believed that the societal ills can be bettered by a system of education. On the contrary, universal education -by lowering standards, morals and tastes to a common denominator, inter alia, -tends to break down existing checks and balances. Education is not drawing forth of potential values, as Einstein rightly said: The true purpose of education is to train the mind to think and for that purpose it is priceless. Come what may, culture cannot be sustained without active participation of families and moral instructions.
