- 12 to 16 5.00

Read the short passage below and answer the questions that follow.
If you have begun to listen on a regular basis, you might still be frustrated by your limited understanding. Accept the fact that you are not going to understand everything. Stay relaxed and don't worry if you don't understand -- even if you continue to have trouble understanding for a while. Don't concentrate too much on your native language. Listen for the gist of the conversation. Don't concentrate on every word you have understood the main idea(s). First, translating creates a barrier between the speaker and the listener. **consuming** time to translate rather than listening to the content fully. People often repeat themselves constantly. By remaining calm, you can usually understand what the speaker had said.
Don't worry about your friends, family, and colleagues. When they speak in your native language, they repeat themselves? If they are like most people, they probably do. That means that if you listen to someone speaking, it is very likely that they will repeat the information, giving you a second, third or even fourth chance to understand what has been said. By remaining relaxed and not worrying about not understanding, and not translating while listening, your brain is free to focus on the most important thing: understanding English in English. By listening to English and trying to enjoy, you are also likely to know a lot more of the vocabulary required.
