Answer questions (11-15) after reading the following passage:

ఈ దిగువ పాసేజీ చదివి 11-15 ప్రశ్నలకు సమాధానము వ్రాయుము.

Passage: The Evolution of Artificial Intelligence (కృత్రిమ మేధస్సు పరిణామం)

The idea of creating "thinking machines" is not new; its roots can be traced back to ancient myths of automatons and intelligent artifacts. However, the modern concept of Artificial Intelligence (AI) truly began to take shape in the mid-20th century with pioneers like Alan Turing. In his 1950 paper, Turing proposed what is now known as the "Turing Test," a criterion for a machine's ability to exhibit intelligent behavior equivalent to, or indistinguishable from, that of a human. Early AI research focused on symbolic reasoning, attempting to create systems that could solve problems through logical rules and symbolic manipulation, the "good old-fashioned AI" (GOFAI) approach. These systems were successful in specific, narrow tasks, like playing chess or solving mathematical equations. However, they struggled with tasks that required common sense or handling uncertain, real-world information.

The limitations of GOFAI paved the way for the rise of connectionism in the 1980s, which draws inspiration from the structure of the human brain. This led to the development of artificial neural networks, which are now the backbone of modern AI. Unlike rule-based systems, neural networks learn from vast amounts of data, identifying patterns and making predictions without being explicitly programmed for every scenario. Deep learning, a subset of machine learning using networks with multiple layers, has enabled breakthroughs in areas like image recognition and natural language processing. Despite these advancements, significant challenges remain. Creating a machine with true consciousness or self-awareness, rather than just simulating it, is still a distant goal. Furthermore, as AI systems become more integrated into society, ethical considerations regarding bias in algorithms, job displacement, and the potential for misuse are becoming increasingly urgent concerns.
