'Chemmeen' is a classic work by Thakazhi Sivasankaran Pillai, one of the giants of Malayalam literature. This classic novel, set in Kerala, depicts the lives and sufferings of the fishing community with great sensitivity. Winner of the President's Award, Chemmeen is a tragic tale with great emotional appeal. It has been translated into 14 Indian languages as well as English and a number of European languages.

The central character in the novel is Chembankunju, an arrogant and ambitious fisherman whose one aim in life is to own a boat and a net. Sacrificing the little joys and pleasures of life, he saves whatever he can and succeeds in buying a boat with the help of Pareekutty, a young Muslim trader, on condition that the fish caught by him will be sold to Pareekutty alone. Chembankunju's daughter, Karuthamma, falls in love with Pareekutty. However, Karuthamma's mother, Chakki, warns her daughter that the customs of their community will not allow her to marry Pareekutty, who is an outsider.

Karuthamma gives up her love for Pareekutty and is married to Palani, an orphan youth. After the wedding, Karuthamma accompanies her husband to his village and sets up her own home. When her mother suddenly falls ill, her father asks Karuthamma to return home and look after her mother, but Karuthamma is unwilling to leave her husband's side. In anger, Chembankunju disowns Karuthamma.

After acquiring a boat Chembankunju becomes greedy and breaks his promise to sell his fish to Pareekutty, as the latter is unable to give him ready cash. Chembankunju's greed and dishonesty drive Pareekutty to bankruptcy.

Although Karuthamma is faithful to her husband Palani, the story of her love for Pareekutty spreads and haunts Palani. Palani's friends refuse to take him fishing with them because of the scandal. Karuthamma swears to her husband that she is chaste and Palani believes her. He decides to go fishing alone.

By a strange stroke of destiny, Karuthamma and Pareekutty meet one moonlit night. Their old love is awakened and they join in an ecstatic embrace when Palani is away at sea.

Kadalamma, the goddess of the sea, is annoyed and punishes Karuthamma. Palani is caught in a treacherous undercurrent. The sea in its fury devours Palani as the lovers find bliss in each other's arms. Next morning the lovers, hand in hand, are found dead, having been washed ashore.

The story of Chemmeen has many layers of meaning. At one level it tells us that true love recognises no religious or cultural boundaries. But it also shows us that passionate, uncontrolled love can destroy as well as save human beings. The novel also shows how greed and jealousy can cause people to change. While its power and grandeur flow from the wild and powerful ocean that rules the fishing community, its poetic beauty lies in its depiction of the small moments of joy and sorrow that can mark the lives of ordinary people. The novel has been made into a memorable Malayalam movie, directed by Ramu Kariat.

Earth has a special place in our Milky Way galaxy. Earth has sprawling continents and blue seas. The most important feature of the earth is life. Earth is the only planet that harbours every sort of life. Earth has a unique combination of air, water and land that nurtures life from microscopic amoebas to giant blue whales. Apart from this, earth's atmosphere has a mixture of breathable air for animals and plants. It also has an apt combination of oxygen rich ozone layer and an electromagnetic field. Both these features act as a force field against solar radiation and space debris. The other planets in our solar system are either too hot or too cold to support liquid water but earth has just right temperature. Oceans cover about 70 per cent of the planet's surface and are a source of water vapour which is responsible for our weather. The earth is not perfectly round but it is oblate spheroid. It means that it has a sphere that's slightly wider at the equator than at the poles. The formation of massive clouds of gas and dust roughly happened 4.6 billion years ago. Gradually it changed into present day form which is called earth. Earth spins along an imaginary line equator which is halfway between the north and south poles. Earth's rotation is also an effect of the formation of our solar system. Earth rotates at the speed of 1,037 mph. Earth spins fastest at the equator. That's the reason we have four seasons as earth is tilted on its axis. This seasonal effect is greater the more you are farther from the equator.

Earth is the only planet that harbours every sort of life. Earth has a unique combination of air, water and land that nurtures life from microscopic amoebas to giant blue whales. Apart from this, earth's atmosphere has a mixture of breathable air for animals and plants. It also has an apt combination of oxygen rich ozone layer and an electromagnetic field. Both these features act as a force field against solar radiation and space debris. The other planets in our solar system are either too hot or too cold to support liquid water but earth has just right temperature. Oceans cover about 70 per cent of the planet's surface and are a source of water vapour which is responsible for our weather. The earth is not perfectly round but it is oblate spheroid. It means that it has a sphere that's slightly wider at the equator than at the poles. The formation of massive clouds of gas and dust roughly happened 4.6 billion years ago. Gradually it changed into present day form which is called earth. Earth spins along an imaginary line equator which is halfway between the north and south poles. Earth's rotation is also an effect of the formation of our solar system. Earth rotates at the speed of 1,037 mph. Earth spins fastest at the equator. That's the reason we have four seasons as earth is tilted on its axis. This seasonal effect is greater the more you are farther from the equator.

Q.7 Below are given two sets of numbers. In each set of numbers, a certain mathematical operation on the first number results in the second number. Similarly, certain mathematical operation on the second number results in the third number and so on. Which of the given operations follows the same set of operations as in question?

(NOTE – A two/three-digit number cannot be broken into individual digits for operations e.g. if 37 is followed by 10, the operation cannot be 3+7 as a two-digit number cannot be broken into individual digits)
