Read the given passage carefully and answer the questions that follow.

In the heart of Ladakh, nestled between rugged mountains and barren plains, lies the ancient monastery of Hemis. Built in the 17th Century, Hemis Monastery is not just a religious center but also a cultural treasure that reflects the spiritual and artistic legacy of the region. Every year, thousands of visitors gather here to witness the Hemis Festival—a two-day celebration honoring Padmasambhava, the revered figure credited with bringing Tibetan Buddhism to Ladakh.

What makes Hemis unique is not merely its remote location or its centuries-old architecture, but the spirit it continues to preserve. Amid the chants of monks, the vibrant swirl of ceremonial masks, and the rhythmic beats of sacred drums, one can sense a deep continuity—a living connection between past and present. The festival is both a religious observance and a communal gathering, where ancient traditions are not only performed but passed on and revitalised.

In recent years, however, rising tourism and expanding infrastructure have begun to transform the surrounding landscape. While this brings economic benefits and increased global attention, it also risks eroding the authenticity of Ladakh's delicate cultural fabric. Conservationists warn that without a thoughtful balance between development and preservation, irreplaceable heritage sites like Hemis could lose their soul.

Hemis stands as a vivid reminder that history isn't just recorded in books—it lives in places, people, and rituals. Safeguarding such spaces means protecting the stories that continue to shape and inspire generations.

Comprehension:

Food corporations engineer unhealthy snacks to create addiction, package them in ways that mislead consumers about their nutritional value, and direct their marketing towards children. Some researchers tasked students with reading news articles detailing the deceptive practices of food corporations in their advertising strategies. Their goal was to determine whether this information would influence the students' perceptions of junk food. Worldwide, children are consuming increasing amounts of high-sugar, high-fat, and high-salt foods, largely due to the influence of cunning advertisements.

Although junk food has been linked to various health issues such as obesity and diabetes, food companies invested approximately \$9 billion in TV advertisements promoting unhealthy snacks in 2017. Advertisements featuring animated characters can make cereal appear enjoyable, while depictions of athletes enjoying sugary beverages portray them as cool choices. Corporations understand that if children desire a product, they'll pester their parents to purchase it. This revealed that analysing advertisements prompted students to opt for healthier snack choices.
