Read the following passage and answer the questions that are given below.

In the Jewel House, Deborah Harkness offers a rich, scholarly exploration of 16th century London's scientific community. Rather than focusing on what sparked the scientific revolution, Harkness investigates what "science" and "scientist" meant in that era. Using a wide range of sources such as books, instruments, and notebooks, she constructs a detailed and vivid map of the individuals who shaped London's scientific culture. Each chapter explores specific communities and locations, from apothecaries in Lime Street to clockmakers near St. Paul's, and even imprisoned thinkers like Clement Draper in Southwark. Harkness emphasizes how these practitioners developed knowledge through hands on experience, often prioritizing collaborative, text-based exchanges over individual recognition. Her dynamic analysis reveals that these early scientists, influenced by humanist methods of note taking and information sharing, laid the groundwork for experimental inquiry. Through this meticulous work, Harkness transforms the city of London into a vibrant hub of evolving natural knowledge and communal intellectual effort.

Rather than focusing on what sparked the scientific revolution, Harkness investigates what "science" and "scientist" meant in that era. Using a wide range of sources such as books, instruments, and notebooks, she constructs a detailed and vivid map of the individuals who shaped London's scientific culture. Each chapter explores specific communities and locations, from apothecaries in Lime Street to clockmakers near St. Paul's, and even imprisoned thinkers like Clement Draper in Southwark. Harkness emphasizes how these practitioners developed knowledge through hands on experience, often prioritizing collaborative, text-based exchanges over individual recognition. Her dynamic analysis reveals that these early scientists, influenced by humanist methods of note taking and information sharing, laid the groundwork for experimental inquiry. Through this meticulous work, Harkness transforms the city of London into a vibrant hub of evolving natural knowledge and communal intellectual effort.
