Q76. According to the passage, which component of EQ is considered the most foundational?

Read the following passage and answer the questions based on the passage:

Emotional intelligence, often abbreviated as EQ, refers to the capacity to recognise, understand, manage, and effectively utilise one's own emotions as well as the emotions of others. Unlike cognitive intelligence, which is largely fixed from birth, emotional intelligence is considered a dynamic and developable skill set. Researchers such as Daniel Goleman have identified five core components of EQ: self-awareness, self-regulation, motivation, empathy, and social skills. Of these, self-awareness is arguably the most foundational, as it enables individuals to perceive their emotional states accurately and understand how these states influence their behaviour and decisions. Without self-awareness, the remaining components of EQ are difficult to cultivate meaningfully. Self-regulation, the second component, refers to the ability to control impulsive reactions and channel emotions constructively. Individuals with high self-regulation are less likely to make decisions driven by momentary emotional surges and are more adept at sustaining composure under stress. Empathy, another vital component, goes beyond mere sympathy; it involves genuinely understanding another person's emotional perspective, which is essential in building trust and fostering collaborative relationships. In professional contexts, leaders with high EQ tend to create psychologically safe environments where team members feel valued and heard. Studies indicate that emotional intelligence is a stronger predictor of professional success than IQ alone, particularly in roles that require interpersonal interaction, conflict resolution, and adaptive leadership. Developing EQ requires consistent self-reflection, feedback from others, and a willingness to remain emotionally open even in adversarial situations. Ultimately, emotional intelligence is not about suppressing emotions but about harnessing them as a source of insight, resilience, and purposeful connection.

- (a) Empathy
- (b) Social skills
- (c) Self-awareness
- (d) Motivation

Ans.(c)

Q77. What does the passage suggest about emotional intelligence in comparison to cognitive intelligence?

Read the following passage and answer the questions based on the passage:

Emotional intelligence, often abbreviated as EQ, refers to the capacity to recognise, understand, manage, and effectively utilise one's own emotions as well as the emotions of others. Emotional intelligence, often abbreviated as EQ, refers to the capacity to recognise, understand, manage, and effectively utilise one's own emotions as well as the emotions of others. Unlike cognitive intelligence, which is largely fixed from birth, emotional intelligence is considered a dynamic and developable skill set. Researchers such as Daniel Goleman have identified five core components of EQ: self-awareness, self-regulation, motivation, empathy, and social skills. Of these, self-awareness is arguably the most foundational, as it enables individuals to perceive their emotional states accurately and understand how these states influence their behaviour and decisions. Without self-awareness, the remaining components of EQ are difficult to cultivate meaningfully. Self-regulation, the second component, refers to the ability to control impulsive reactions and channel emotions constructively. Individuals with high self-regulation are less likely to make decisions driven by momentary emotional surges and are more adept at sustaining composure under stress. Empathy, another vital component, goes beyond mere sympathy; it involves genuinely understanding another person's emotional perspective, which is essential in building trust and fostering collaborative relationships. In professional contexts, leaders with high EQ tend to create psychologically safe environments where team members feel valued and heard. Studies indicate that emotional intelligence is a stronger predictor of professional success than IQ alone, particularly in roles that require interpersonal interaction, conflict resolution, and adaptive leadership. Developing EQ requires consistent self-reflection, feedback from others, and a willingness to remain emotionally open even in adversarial situations. Ultimately, emotional intelligence is not about suppressing emotions but about harnessing them as a source of insight, resilience, and purposeful connection.

- (a) They avoid conflict at all costs in the workplace
- (b) They focus primarily on results over interpersonal relationships
- (c) They create environments where team members feel valued and heard
- (d) They rely more on IQ than EQ while making decisions
