**Q76.** Choose the correct article to complete the sentence:

---

"\_\_\_ environment needs to be protected for future generations."

Read the passage and answer the questions:

The natural environment is the foundation of all life on Earth. Clean air, fresh water, fertile soil, and diverse ecosystems are not merely resources — they are the very conditions that make human civilisation possible. Yet, decades of industrialisation, deforestation, and pollution have placed enormous pressure on these systems.

One of the most alarming consequences of environmental degradation is climate change. Rising global temperatures have led to the melting of polar ice caps, rising sea levels, and increasingly frequent extreme weather events such as floods, droughts, and cyclones. Scientists warn that unless carbon emissions are drastically reduced, these effects will become irreversible.

Conservation, however, is not solely the responsibility of governments. Individuals can make a significant difference through small but consistent actions — reducing waste, conserving water, planting trees, and choosing sustainable products. Collective effort, guided by awareness and a sense of responsibility, is the only sustainable path forward for the planet.
