Options :

- ✘ Uterine cavity
- ✔ Fallopian tube
- ✘ Cervical canal
- ✘ Ovary

Question Number : 46 Question Id : 4410091503015 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

Read the given assertion (A) and reason (R) and select the correct option based on the analysis of these statements.

Assertion (A): For a newborn delivered by an HIV-positive mother, standard protocol dictates that the infant must start a prophylactic course of antiretroviral therapy (ART) immediately, ideally within 6 to 12 hours of birth.

Reason (R): The goal of immediate newborn ART prophylaxis is to prevent the vertical transmission of the virus by treating any HIV that may have crossed the placenta or been acquired during the birthing process, thereby minimising the risk of mother-to-child transmission (MTCT).

Options :

- ✔ Both A and R are true, and R is the correct explanation of A.
- ✘ Both A and R are true, but R is not the correct explanation of A
- ✘ A is true, but R is false.
- ✘ A is false, but R is true.

Question Number : 47 Question Id : 4410091535157 Question Type : MCQ Option Shuffling : Yes

Correct Marks : 2 Wrong Marks : 0.5

Which diameter of the fetal skull extends from the junction of the neck and floor of the mouth to the center of the anterior fontanelle?

Options :

1. ✘ Suboccipito-bregmatic
2. ✘ Suboccipito-frontal
3. ✘ Submento-vertical
4. ✔ Submento- bregmatic
