Exam Slot 2

The questions are based on a short passage. Read the passage below to answer the questions. Choose the correct answer from the 4 listed choices.

The U.S. always was large in terms of area, but its population was small, only 4 million in 1790. Population growth was rapid, reaching 316 million in 2013. Economic growth in terms of overall GDP was even faster. However the nation's military strength was quite limited in peacetime before 1940. The expansion of slavery was increasingly controversial and fueled political and constitutional battles, which were resolved by compromises. Slavery was abolished in all states north of the Mason–Dixon line by 1804, but the South continued to profit off the institution, producing high-value cotton exports to feed increasing high demand in Europe.

The 1860 presidential election of Republican Abraham Lincoln was on a platform of ending the expansion of slavery and putting it on a path to extinction. Seven cotton-based deep South slave states seceded and later founded the Confederacy months before Lincoln's inauguration. No nation ever recognized the Confederacy, but it opened the war by attacking Fort Sumter in 1861. A surge of nationalist outrage in the North fueled a long, intense American Civil War (1861-1865). It was fought largely in the South as the overwhelming material and manpower advantages of the North proved decisive in a long war.

The war's result was restoration of the Union, the impoverishment of the South, and the abolition of slavery. The national government emerged much stronger, and because of the Fourteenth Amendment, it gained the explicit duty to protect individual rights.
