Comprehension:

Read the given passage and answer the questions that follows.

Kevlar, a lightweight and flexible fibre, was invented in 1964 by an American chemist named Stephanie Louise Kwolek who was working for DuPont, an American chemical company. That year people were facing fuel shortage due to a conflict in the Middle East. Kwolek and her group were trying to make a lightweight, yet durable fibre that could be used in tires. Lighter tires would help to save fuel by giving better mileage. However, the tires also had to be strong enough to bear the damage that would happen over a period of time. Although they had been working on creating or synthesising such a fibre for some time, they had not tasted success. At last, they succeeded in their attempt when they decided to test a milky white solution that was created by mixing two chemicals. This milky white solution was usually thrown away but Kwolek convinced one of her team members to help her test it. They were amazed to discover that this fabric was more durable than nylon and steel. It was named Kevlar by its inventor Kwolek.

Kevlar is a remarkable fabric known for its strength and durability. As a result of these characteristics it is used in a wide variety of products. It is used in sporting equipment like bike tires and tennis racquets, in musical instruments like drum heads and speaker cones. It is used in protective gear like motorcycle safety jackets, gloves and shoes. However, Kevlar is best known for its ability to stop bullets. The first Kevlar bulletproof vest was made in 1975 by Richard Armellino. It contained 15 layers of Kevlar and could stop handgun and shotgun bullets.

Another important property of Kevlar is heat resistance and because of this it has been used to replace asbestos. Asbestos can resist temperatures over 1000 degrees Fahrenheit and so it was used in roofs, electrical cables and brake pads, until people discovered that it causes cancer and other serious health problems. In comparison to asbestos, Kevlar poses no such risks and has therefore been used to replace asbestos in many cases.

Since its invention in 1964, Kevlar has touched many aspects of our daily lives from musical instruments to protective equipment. This miraculous fibre has made consumer products better and stronger.

SubQuestion No : 61
