Comprehension:
Read the given passage and answer the questions that follow.
The First Wave of Feminism emerged in the late 19th and early 20th centuries as a significant social and political movement aimed at securing basic legal rights for women. It was primarily focused on issues such as women's suffrage, property rights, and access to education. This movement developed in response to widespread gender inequality, where women were largely excluded from political participation and denied legal autonomy. One of the central goals of the movement was the right to vote, which became a powerful symbol of equality and citizenship. Activists organized campaigns, protests, and petitions to demand suffrage. In countries like the United States and the United Kingdom, the movement gained momentum through the efforts of prominent leaders such as Susan B. Anthony and Emmeline Pankhurst. Their advocacy helped bring women's issues into mainstream political discourse. The First Wave was largely driven by middle-class women and often focused on legal reforms rather than broader social change. While it achieved important victories—such as women gaining the right to vote in several countries—it did not fully address issues related to race, class, and working conditions. As a result, its impact was both transformative and limited. Despite its shortcomings, the First Wave laid the foundation for future feminist movements. It established the importance of collective action and highlighted the need for gender equality in public life. Its legacy continues to influence contemporary discussions on women's rights and social justice.

Option 1 ID :	4410095280289
Option 2 ID :	4410095280287
Option 3 ID :	4410095280290
Option 4 ID :	4410095280288
Status :	Answered
Chosen Option :	D

Q.9	Which of the following best describes the interaction between CPU and DMA during block transfer?
Ans	A. CPU and DMA alternate each word transfer over the bus B. CPU sends control information once, then DMA handles the transfer independently C. CPU supervises every byte of transfer to ensure correctness D. CPU transfers data to cache, DMA transfers it to I/O

Question ID :	4410091345122
Option 1 ID :	4410095313166
Option 2 ID :	4410095313165
Option 3 ID :	4410095313164
Option 4 ID :	4410095313167
Status :	Answered
Chosen Option :	B

Q.10	What do you mean by TLD name servers?
Ans	A. Top-level disk name servers
	B. Tiered-level domain name servers
	C. Top-level domain name servers
	D. Task-levelled data name servers

Question ID :	4410091439587
Option 1 ID :	4410095687015
Option 2 ID :	4410095687013
Option 3 ID :	4410095687012
Option 4 ID :	4410095687014

Chosen Option :	D

Q.11	Which of the following Windows API functions is used to write data to a file?
Ans	A. fprintf()
	B. WriteFile()
	C. CreateFile()
	D. fwrite()

Question ID :	4410091186134
Option 1 ID :	4410094678834
Option 2 ID :	4410094678832
Option 3 ID :	4410094678831
Option 4 ID :	4410094678833
Status :	Answered
Chosen Option :	D

Q.12	If a D Flip-Flop has D = 1 and a rising edge of the clock occurs, what will the Q output be <u>with reference to Sequential Circuits</u> ?
Ans	A. Undefined
	B. 1
	C. Toggle
	D. 0

Question ID :	4410091431266
Option 1 ID :	4410095653357
Option 2 ID :	4410095653355

Chosen Option :	D

Q.14	Which of the following is an application of compiler technology?
Ans	A. Code optimization B. Cache mapping C. Virtual memory management D. Disk scheduling

Question ID :	4410091188167
Option 1 ID :	4410094686922
Option 2 ID :	4410094686925
Option 3 ID :	4410094686923
Option 4 ID :	4410094686924
Status :	Answered
Chosen Option :	A

Q.15	Which technique is commonly used by a compiler to recognize identifiers in a programming language?
Ans	A. Regular expressions and finite automata B. Manual code scanning C. High-level code optimization D. Context-free grammar

Question ID :	4410091377116
Option 1 ID :	4410095440019
Option 2 ID :	4410095440021
Option 3 ID :	4410095440022
Option 4 ID :	4410095440020
Status :	Answered
Chosen Option :	C

Q.16	What is the primary function of a Finite State Machine (FSM) simulator?
Ans	☐ A. To convert FSMs into executable machine-level programs
	☐ B. To reduce the number of states in FSMs without running them
	☐ C. To transform FSMs directly into digital circuit layouts
	☒ D. To visually or textually test and analyze FSM behavior based on inputs and transitions

Question ID :	441009909550
Option 1 ID :	4410093592083
Option 2 ID :	4410093592086
Option 3 ID :	4410093592085
Option 4 ID :	4410093592084
Status :	Answered
Chosen Option :	D

Q.17	Which of the following statements correctly describes the power set of the set {a, b}?
Ans	☐ A. It is the set containing only the singleton subsets of {a, b}
	☐ B. It is the set containing only the empty set of {a, b}
	☒ C. It is the set containing all possible subsets of {a, b}
	☐ D. It is the set containing only the original set {a, b}

Question ID :	4410092319315
Option 1 ID :	4410099121691
Option 2 ID :	4410099121690
Option 3 ID :	4410099121692
Option 4 ID :	4410099121689
Status :	Answered
Chosen Option :	C

Q.18	A graduate student wants to find the likelihood of passing a Statistics exam, given that they attended all lectures. Which formula should the student use to determine the probability of passing given attendance?
Ans	☒ A. The formula $P(\text{Pass} \text{Attend}) = P(\text{Pass and Attend})$ divided by $P(\text{Attend})$ is appropriate.
	☐ B. The formula $P(\text{Attend} \text{Pass}) = P(\text{Pass and Attend})$ divided by $P(\text{Pass})$ is appropriate.
	☐ C. The formula $P(\text{Pass})$ times $P(\text{Attend})$ is appropriate for this scenario.
	☐ D. The formula $P(\text{Pass})$ plus $P(\text{Attend})$ is appropriate for this scenario.

Question ID :	4410092231169
Option 1 ID :	4410098778112

Status :	Answered
Chosen Option :	D

Q.22	Which of the following is the correct symbol for representing the decimal number 12 in hexadecimal system?	
Ans	A. D	
	B. A	
	C. C	
	D. B	
Question ID : 44100978208 Option 1 ID : 441009310843 Option 2 ID : 441009310840 Option 3 ID : 441009310842 Option 4 ID : 441009310841 Status : Answered Chosen Option : C		
Q.23	In a circular queue using arrays, the rear is at index 4, front is at index 2, and capacity = 5. Which expression checks if the queue is full?	
Ans	A. (rear == front - 1)	
	B. (rear == front)	
	C. (rear + 1 == front)	
	D. ((rear + 1) % capacity == front)	
Question ID : 441009271221 Option 1 ID : 4410091053720 Option 2 ID : 4410091053722 Option 3 ID : 4410091053719 Option 4 ID : 4410091053721 Status : Answered Chosen Option : A		

Q.24	Consider a Mealy machine designed to process a sequence representing the presence of mineral samples ('M') and non-mineral samples ('N') during a geological survey. The machine outputs 'A' when the current sample is 'M' and the previous sample was 'N', otherwise it outputs 'B'. Which description below correctly reflects the machine's output behavior?	
Ans	✔ A. It produces output based on both the current input and the previous state. ✘ B. It changes output only when the input switches from 'M' to 'N'. ✘ C. It produces output based only on the current input symbol. ✘ D. It waits until the next transition to output a value.	Question ID : 4410092215504 Option 1 ID : 4410098718156 Option 2 ID : 4410098718154 Option 3 ID : 4410098718157 Option 4 ID : 4410098718155 Status : Answered Chosen Option : A
Q.25	In an associative memory system, the argument register is used to:	
Ans	✘ A. Generate memory addresses sequentially ✘ B. Store the result of a match ✔ C. Compare with key fields in all memory locations simultaneously ✘ D. Hold data to be written into memory	Question ID : 441009220121 Option 1 ID : 441009863454 Option 2 ID : 441009863451 Option 3 ID : 441009863453 Option 4 ID : 441009863452 Status : Answered Chosen Option : D
Q.26	Which of the following is not a property of a discrete random variable X, that takes any value from 0, 1, 2,...,n?	
Ans	✔ A. $P(X = n) < 0$ ✘ B. $\sum P(X = x) = 1$, the summation is taken over all possible values of X ✘ C. If A and B are two disjoint subsets of {0, 1, 2, ...,n} then $P(A + B) = P(A) + P(B)$ ✘ D. For any possible value of X, $P(X = x) \geq 0$	Question ID : 4410092231174 Option 1 ID : 4410098778132 Option 2 ID : 4410098778133 Option 3 ID : 4410098778134 Option 4 ID : 4410098778131 Status : Answered Chosen Option : D

Q.27	Which of the following is not a connection-oriented service?
Ans	A. Reliable byte-stream delivery. B. Maintain frame sequencing. C. Stateless packet forwarding.

D. Perform a Handshake to set up the connection.

Question ID :	4410091438628
Option 1 ID :	4410095683214

Status :	Answered
Chosen Option :	C

Q.35	Which of the following statements best distinguishes the relationship between a service and a protocol in a layered network architecture?
Ans	A. A service specifies what operations a layer offers to the layer above, whereas a protocol defines how peer entities within the same layer communicate to provide that service.
	B. A protocol defines the interface between two adjacent layers, while a service specifies the message exchange rules between peer entities.
	C. Both services and protocols define the message formats and meanings used between the same layer entities, but at different abstraction levels.
	D. A service is the physical implementation of a protocol; thus, changing the protocol automatically changes the provided service.

Q.57	Which statement best describes both an advantage and a disadvantage of Insertion Sort?
Ans	A. Efficient for nearly sorted data due to adaptability but impractical for large datasets due to $O(n^2)$ complexity. B. Guarantees logarithmic time for sorted inputs but remains inefficient for small datasets as its complexity stays $O(n^2)$. C. Performs optimally for any input type but lacks stability, failing to preserve the relative order of identical elements. D. Fastest sorting algorithm for all inputs but requires excessive auxiliary space, making it unsuitable for memory-limited systems.

Chosen Option :	D

Q.66	Which statement about left recursion in context-free grammars is accurate?
Ans	A. Left recursion can be direct or indirect and may lead to infinite recursion in top-down parsers. B. Left recursion has no impact on recursive-descent parsing. C. Left recursion occurs when a non-terminal appears at the end of its own production. D. Left recursion is required for building LL(1) parsers without any modification.

Question ID :	4410091433445
Option 1 ID :	4410095662343
Option 2 ID :	4410095662345
Option 3 ID :	4410095662342
Option 4 ID :	4410095662344
Status :	Answered
Chosen Option :	A

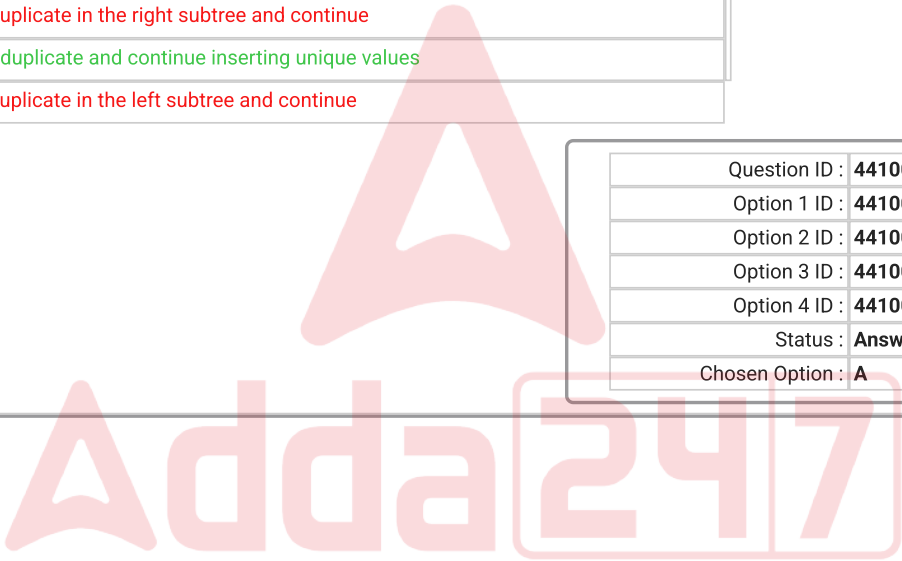

Q.67	Consider the following grammar G: $E \rightarrow TE'$ $E' \rightarrow +TE' \epsilon$ $T \rightarrow FT'$ $T' \rightarrow *FT' \epsilon$ $F \rightarrow (E) id$ Which of the following statements about top-down parsing of grammar G is true?
Ans	A. The grammar requires backtracking since FIRST and FOLLOW sets of E' overlap. B. The grammar is left-recursive and hence cannot be used for top-down parsing. C. The grammar is suitable for LL(1) (predictive) parsing and does not require backtracking. D. The grammar is not left-recursive and can be parsed using a predictive (LL(1)) parser.

Question ID :	4410091440499
Option 1 ID :	4410095690673
Option 2 ID :	4410095690671
Option 3 ID :	4410095690674

Q.69	Which of the following statements is true regarding the differentiability of a function at a point?	
Ans	A. A function may be discontinuous at a point and still be differentiable there. B. A function must be differentiable everywhere to be continuous at a point. C. A function is differentiable at a point only if its derivative is infinite there. D. A function must be continuous at that point to be differentiable there.	
Question ID : 4410092319369 Option 1 ID : 4410099121907 Option 2 ID : 4410099121908 Option 3 ID : 4410099121905 Option 4 ID : 4410099121906 Status : Answered Chosen Option : B		
Q.70	You are tasked to construct a binary search tree (BST) from a stream of incoming sensor readings, where each reading is processed as it arrives. Midway, the sensor malfunctions and emits a duplicate reading not originally in the stream. To preserve BST properties and ensure efficient future search operations, which strategy should you employ for the duplicate reading?	
Ans	A. Replace the existing node with the duplicate value and continue B. Allow the duplicate in the right subtree and continue C. Ignore the duplicate and continue inserting unique values D. Allow the duplicate in the left subtree and continue

Q.75

Given a code snippet in C programming language as follows:

int a = 10;
int *p;
int **w;
p = &a;

which statement correctly assigns the address of 'p' to 'w'?

Ans

✖ A. w = p;

✔ B. w = &p;

✖ C. w = &&a;

✖ D. w = *p;

Q.84	A logistics company manages a tracking system where each package ID is stored in a chronological list as the packages are processed. An engineer suggests that, to locate a particular package's ID, the system should check each ID sequentially from the start until the target is found or the list ends. Which statement most accurately reflects the main drawback of this approach if the company expects the number of packages to increase dramatically over time?
Ans	A. The memory needed to store package IDs will remain constant even as the list grows. B. Finding a package ID will become faster as the number of packages increases. C. The time to search for any package ID will stay about the same, regardless of list size. D. Search time grows linearly with the number of packages.

Main Memory → Registers → Cache → Secondary Storage	Question ID : 441009752155 Option 1 ID : 4410092962535 Option 2 ID : 4410092962536 Option 3 ID : 4410092962534 Option 4 ID : 4410092962537 Status : Answered Chosen Option : A
Q.87	If a system uses 32-bit virtual addresses and a page size of 4 KB, how many entries are needed in a single-level page table?	
Ans	✗ A. 2^{12} ✗ B. 2^{10} ✓ C. 2^{20} ✗ D. 2^{32}	Question ID : 4410091433455 Option 1 ID : 4410095662385 Option 2 ID : 4410095662382 Option 3 ID : 4410095662383 Option 4 ID : 4410095662384 Status : Answered Chosen Option : C
Q.88	In an associative memory system, the key register holds:	
Ans	✗ A. The control bits for memory timing. ✗ B. The binary result of address decoding. ✗ C. The memory address of the required data. ✓ D. The tag field used for parallel comparison.	Question ID : 4410091385230 Option 1 ID : 4410095471660 Option 2 ID : 4410095471663 Option 3 ID : 4410095471662 Option 4 ID : 4410095471661 Status : Answered Chosen Option : A

Q.89	Which of the following best describes the relationship between pointers and 1D array declaration in C programming language?
Ans	A. The array name is a pointer variable and can be reassigned to a new address B. The array name and any pointer variable are interchangeable. C. The array name points to the last element of the array. D. The array name points to the first element, but is not a modifiable pointer.

Question ID :	4410092215468
Option 1 ID :	4410098718012
Option 2 ID :	4410098718011
Option 3 ID :	4410098718013
Option 4 ID :	4410098718010
Status :	Answered
Chosen Option :	D

Q.90	Which of the following scenarios best describes a violation of the consistency property?
Ans	A. A transaction completes but leaves the database in a state where total credits ≠ total debits. B. Two transactions read and write the same record simultaneously. C. A transaction partially runs due to a crash. D. Data from a committed transaction is deleted after a restart.

Question ID :	4410091196225
Option 1 ID :	4410094718599
Option 2 ID :	4410094718597
Option 3 ID :	4410094718596
Option 4 ID :	4410094718598
Status :	Answered
Chosen Option :	B

Q.91	A botanist creates a digital representation of a rare plant's evolutionary tree, where each node records a unique genetic mutation. During research, they need to extract the chronological sequence of mutations as they would naturally occur along the main lineage. Which traversal algorithm, when applied to the tree, most accurately reflects the order of these mutations if left sub-branches represent earlier side mutations and right sub-branches represent later side mutations?
Ans	A. A preorder traversal starts with the main mutation, missing proper side branch sequencing. B. Applying a postorder traversal lists mutations from leaves to root, not main lineage order.

C. Performing an inorder traversal yields the desired mutation sequence along the main lineage.

D. Level order traversal groups mutations by depth, not by evolutionary chronology.

Question ID :	4410092215495
Option 1 ID :	4410098718120
Option 2 ID :	4410098718118
Option 3 ID :	4410098718121
Option 4 ID :	4410098718119
Status :	Answered
Chosen Option :	C

Q.92	What is the worst-case time complexity of a linear search algorithm in an unsorted array of n elements?
Ans	A. $O(1)$ B. $O(n)$

C. $O(\log n)$

D. $O(n \log n)$

Question ID :	441009749075
Option 1 ID :	4410092950127
Option 2 ID :	4410092950126
Option 3 ID :	4410092950124
Option 4 ID :	4410092950125
Status :	Answered
Chosen Option :	D

Q.93	Which operation in Relational Algebra is used to retrieve specific columns from a relation?
------	---

Ans	A. Cartesian Product (x)
-----	--

✓ B. Projection (π)

X C. Intersection ($\cap$)

☒ D. Selection (σ)

Question ID : 44100930927

Option 1 ID : 441009123198

Option 2 ID : 441009123197

Option 3 ID : 441009123199

Option 4 ID : 441009123196

Status :	Answered
----------	----------

Chosen Option : **B**

Q.94 In the grammar $S \rightarrow aSbS|c$, which strings belong to the language?

Ans	✓ A. Any string of a's and b's
-----	--------------------------------

X B. string of "ab" or "ba"

☒ C. Only "ab" and "ba"

☒ D. Only "a" and "b"

Question ID : 4410091479901

Option 1 ID: 4410095846703

Option 2 ID : 4410095846705

Option 3 ID : 4410095846704

Option 4 ID : 4410095846702

Status :	Answered
----------	----------

Chosen Option : **A**

Q.95 What is the division of the main memory in Fixed Partitioning in memory management of operating system?

Ans  A. Destroyed as needed by the processes.

X B. Created as needed by the processes.

- ✓ C. Made at boot time and remain unchanged in size and number.

☒ D. Dynamically resized when a process terminates.

Question ID : 4410091337155

Option 1 ID : 4410095280408

Option 2 ID : 4410095280407

Option 3 ID : 4410095280409

Option 4 ID : 4410095280410

Status : **Answered**

Chosen Option : **C**

Q.96	Which of the following is true about IEEE standard floating-point formats?
Ans	✔ A. Single-precision uses 32 bits, double-precision uses 64 bits ✖ B. Both single and double precision use 32 bits ✖ C. Single-precision uses 64 bits, double-precision uses 32 bits ✖ D. Single-precision uses 16 bits, double-precision uses 32 bits

Question ID :	4410091431235
Option 1 ID :	4410095653231
Option 2 ID :	4410095653232
Option 3 ID :	4410095653230
Option 4 ID :	4410095653233
Status :	Answered
Chosen Option :	A

Q.97	Which of the following statements correctly describes Isolation and Transaction Isolation Levels in a database system? Statement-1: Ensuring the isolation property is the responsibility of a component of the database system called the concurrency-control system. Statement-2: The isolation levels may be Serializable, Repeatable read, Read committed, Read uncommitted and all the isolation levels additionally disallow dirty writes, that is, they disallow writes to a data item that has already been written by another transaction that has not yet committed or aborted.
Ans	✖ A. Statement-1 is False and Statement-2 is True ✖ B. Statement-1 is True and Statement-2 is False ✔ C. Statement-1 is True and Statement-2 is True ✖ D. Statement-1 is False and Statement-2 is False

Question ID :	4410091357939
Option 1 ID :	4410095363918
Option 2 ID :	4410095363917
Option 3 ID :	4410095363920
Option 4 ID :	4410095363919
Status :	Answered
Chosen Option :	C

Q.98	In a shift-reduce parser, which of the following lists includes all four possible parser actions?	
Ans	A. Shift, Move, Accept, Reject B. Shift, Jump, Reduce, Halt C. Reduce, Copy, Accept, Abort D. Shift, Reduce, Accept, Error	
Question ID : 4410091398442 Option 1 ID : 4410095523519 Option 2 ID : 4410095523522 Option 3 ID : 4410095523520 Option 4 ID : 4410095523521 Status : Answered Chosen Option : B		
Q.99	Which of the following is a valid declaration for a 2D array in C?	
Ans	A. int a[][] = {{1,2}, {3,4}}; B. int a[2,2] = {{1,2}, {3,4}}; C. array a[2][2] = {{1,2}, {3,4}}; D. int a[2][2] = {{1,2}, {3,4}};	
Question ID : 441009234439 Option 1 ID : 441009916178 Option 2 ID : 441009916179 Option 3 ID : 441009916181 Option 4 ID : 441009916180 Status : Answered Chosen Option : D		
Q.100	A team develops a text-mining tool that highlights sequences in security logs where a server's alert code is immediately followed by an IP address in the format 10.0.X.Y (where X and Y are integers). Which regular expression most efficiently identifies these patterns without false positives?	
Ans	A. alert\s10\.0\.[0-9]{1,3}\.[A-Z]+ B. alert\s10\.0\.[0-9]*\.[0-9]* C. alert10\.0\.[0-9]+\.[0-9]+ D. alert\s10\.0\.[0-9]+\.[0-9]+
