Study the following information carefully and answer the given questions.
For a recruitment process in a Non-Banking Financial Corporate organization, the candidates need to possess the following qualifications criteria:
(i) A graduate in commerce with at least 60% marks.
(ii) An age of at least 24 years and not more than 40 years as on 1 - 4 - 2018.
(iii) Have a post-qualification work experience of at least 2 years.
(iv) Should have secured 55% marks in the selection process.
However, if the candidate fulfills the above-mentioned criteria except
(A) at (i) and if the candidate is not a graduate in commerce but has a post-graduation degree in finance with minimum of 60% marks, he/she should be referred to the Finance Manager of the organization.
(B) at (iii) and if the candidate fulfills all the eligibility criteria but of post – qualification work experience but has secured 75% marks in the selection process, he/she may be referred to the Trainee Accountant.
Based on the above information study carefully whether following candidates are eligible for the recruitment process and mark your answer as follows. You are not to assume anything other than the information provided in each question.

Sumitra is having age according to the advertisement. She has done her graduation and post-graduation in Commerce and secured 61% and 63% marks respectively. She has a post-qualification work experience as a senior accountant of four and half years. And has secured 58.5% marks in the selection process

- Ans
- ☒ 1. the candidate may be referred to the Finance Manager
 - ☒ 2. the candidate is not to be selected.
 - ☒ 3. the candidate is to be selected.
 - ☒ 4. the candidate may be referred to the Trainee Accountant

Question ID : 16794326504

Status : Not Answered

Chosen Option : --

Comprehension:

Read the following passage and answer the questions given after it.

Climate changes happen for a variety of reasons. Some of these reasons have to do with Earth's atmosphere. The climate change brought by El Niño, which relies on winds and ocean currents, is an example of natural atmospheric changes.

Natural climate change can also be affected by forces outside Earth's atmosphere. For instance, the 100,000-year cycles of ice ages are probably related to changes in the tilt of Earth's axis and the shape of its orbit around the sun. Those planetary factors change slowly over time and affect how much of the sun's energy reaches different parts of the world in different seasons. The impact of large meteorites on Earth could also cause climate change.

The impact of a meteor would send millions of tons of debris into the atmosphere. This debris would block at least some of the sun's rays, making it cold and dark. This climate change would severely limit what organisms could survive. Many palaeontologists believe the impact of a meteor or comet contributed to the extinction of the dinosaurs. Dinosaurs simply could not survive in a cool, dark climate. Their bodies could not adjust to the cold, and the dark limited the growth of plants on which they fed.

Plate tectonics also play a role in climate changes. Earth's continental plates have moved a great deal over time. More than 200 million years ago, the continents were merged together as one giant landmass called 'Pangaea'. As the continents broke apart and moved, their positions on Earth changed, and so did the movements of ocean currents. Both of these changes had effects on climate.

SubQuestion No : 6

Q.6 Which statement is NOT true according to the passage?

- Ans
- ☒ 1. The cycle of ice age is impacted by the tonnes of debris in Earth's atmosphere.
 - ☐ 2. The phenomenon of El Niño relies on winds and ocean currents.
 - ☐ 3. 200 million years ago the earth was one huge landmass called 'Pangaea'.
 - ☐ 4. Climate change severely impacts life on Earth.

SubQuestion No : 10

Q.1
0 The change in the tilt of Earth's axis and the shape of Earth were caused by:

- Ans
- ☒ 1. tonnes of debris in the atmosphere
 - ☒ 2. the cycles of ice age
 - ☒ 3. movement of time
 - ☒ 4. the energy level of the sun

Question ID : 16794326498

Status : Answered

Chosen Option : 2

Comprehension:

Read the following passage and answer the questions given after it.

On 27 March, India demonstrated its capability for shooting down a satellite with a missile fired from the ground, becoming only the fourth country with such a capability. The satellite, which was one of India's own, was literally left in pieces — thousands of them. On Monday, NASA administrator Jim Bridenstine said NASA had identified at least 400 pieces from the wreck, and was tracking 60 that were larger than 10 cm in size. He said 24 of these 60 had got near the International Space Station (ISS) and thus posed a potential threat of collision.

The ISS is the world's only permanent laboratory in space. It is massive, spanning a little larger than a football field, and weighing over 400 tonnes. Hanging about 400 km above Earth's surface, the ISS carries extremely costly infrastructure, with facilities to host three to four astronauts at a time. It serves as a unique platform to carry out a variety of scientific experiments in space, especially those that require zero-gravity situations, and also for testing new space systems and technologies.

What threat could small pieces pose to such massive infrastructure?

The size and weight of the pieces are secondary. What is crucial is that these pieces move at very great speeds. In the low earth orbit, where the targeted Indian satellite was located, objects typically move at almost 8 metres per second, or 28,000 km/ph, in order to stay in their orbits. At such speeds, even a tiny object of just about 100 grams would produce the same kind of impact on collision as a 30 kg stone travelling at about 100 km/hr. The debris from the destroyed Indian satellite would be typically moving at these speeds. A collision with any other satellite in space could render that satellite dysfunctional, if not destroy it.

SubQuestion No : 11

Q.1
1 What is the main purpose of the International Space Station?

Ans  1. To keep a watch on activities on Earth

- ☒ 2. To go around the earth
- ☐ 3. To carry out scientific experiments in space
- ☒ 4. To provide accommodation to astronauts

On 27 March, India demonstrated its capability for shooting down a satellite with a missile fired from the ground, becoming only the fourth country with such a capability. The satellite, which was one of India's own, was literally left in pieces — thousands of them. On Monday, NASA administrator Jim Bridenstine said NASA had identified at least 400 pieces from the wreck, and was tracking 60 that were larger than 10 cm in size. He said 24 of these 60 had got near the International Space Station (ISS) and thus posed a potential threat of collision.

The ISS is the world's only permanent laboratory in space. It is massive, spanning a little larger than a football field, and weighing over 400 tonnes. Hanging about 400 km above Earth's surface, the ISS carries extremely costly infrastructure, with facilities to host three to four astronauts at a time. It serves as a unique platform to carry out a variety of scientific experiments in space, especially those that require zero-gravity situations, and also for testing new space systems and technologies.

What threat could small pieces pose to such massive infrastructure?

The size and weight of the pieces are secondary. What is crucial is that these pieces move at very great speeds. In the low earth orbit, where the targeted Indian satellite was located, objects typically move at almost 8 metres per second, or 28,000 km/ph, in order to stay in their orbits. At such speeds, even a tiny object of just about 100 grams would produce the same kind of impact on collision as a 30 kg stone travelling at about 100 km/hr. The debris from the destroyed Indian satellite would be typically moving at these speeds. A collision with any other satellite in space could render that satellite dysfunctional, if not destroy it.

SubQuestion No : 12

Q.1
2 What did India achieve on 27 March 2019?

- Ans
- ☒ 1. Shot a satellite with a missile
 - ☐ 2. Fired a missile into space

- 3. Sent a small satellite into space
- 4. Broke a satellite into pieces

Question ID : 16794326490

Status : Answered
Chosen Option : 3

Comprehension:

Read the following passage and answer the questions given after it.

At the end of a week, he was able to give me his story.

He was a Lala, a merchant and at one time possessed a flourishing grain business. Then, he made the mistake of taking as partner a man about whom he knew nothing. For a few years, his business prospered and all went well but one day when he returned from a long journey, he found his shop empty and his partner gone. The little money in his possession was only sufficient to meet his personal debts and bereft of credit, he had to seek employment. This he found with a merchant with whom he had traded and for ten years. He had worked for seven rupees a month which was only sufficient to support himself and his son. His wife having died shortly after his partner robbed him. He was on his way from Muzaffarpur to Gaya, on his master's business, when he was taken ill in the train. As he got worse on board the ferry steamer, he had crawled ashore to die on the banks of the sacred Ganges.

Lalaje, stayed with me for about a month, and then one day, he requested permission to continue his journey to Gaya. The request was made as we were walking through the sheds, for Lalajee was strong enough now to accompany me for a short distance each morning when I set out for work and when I asked him what he would do if on arrival at Gaya he found his master had filled his place, he said he would try to find other employment, 'Why not try to get someone to help you to be a merchant again?'

I asked and he replied. The thought of being a merchant again, and able to educate my son, is with me night and day, Sahib, but there is no one in all the world who would trust me, a servant on seven rupees a month and without any security to offer, with the five hundred rupees I should need to give me a new start'.
